# SGX Daily Signal Report

Thursday 20 August 2026 · data to the close

**15 SGX stocks · 7 sectors**
Last 5 trading days: 14–20 Aug
Sections: 1 today · 2 news & last 5 days · 3 next 3 days · 4 system · 5 findings

## 1 · Today in 30 seconds

- **Today.** Today the 15 stocks moved -0.0% on average (7 up, 5 down); over 14–20 Aug they moved +0.8%. Weakest: Consumer Goods (-0.7%), Banking (-0.7%) and REIT (-0.6%); strongest: Industrials (+4.8%) and Telecommunications (+4.7%).
- **Why.** Biggest movers over 14–20 Aug: Sembcorp Industries (+8.2%), ST Engineering (+4.7%) and Singtel (+4.7%). ST Engineering moved without a company news story; the move looks sector-wide. Singtel moved more than the market without a company news story. For Sembcorp Industries, the company news and the price disagree. See section 2.
- **Backdrop.** The market backdrop is calm (VIX 14.9), and Singapore ETF options are neutral (put/call 0.76).
- **New today.** Today's news added a positive signal for DBS Group (not yet in the price), SGX Group (the price went the other way), OCBC Bank (not yet in the price), CapitaLand Integ. Comm. Trust (not yet in the price) and nine more. See section 2.
- **Next 3 days.** The forecast model leans towards a rise for four stocks; a fall for four stocks and no big move for the rest (only six stocks with a ✓ record); normal 3-day swings run from ±0.6% (Mapletree Industrial) to ±3.5% (ST Engineering), so a bigger move than a stock's own swing would be unusual. See section 3.
- **For you.** Flagged □, with a usable model record: SGX Group, where the price went against the news and the model sides with the price; UOB, where the price went against the news and the model sides with the news; ST Engineering, where the price went against the news and the model sides with the price. Their cards are worth reading first. The moves in ST Engineering and Singtel came without company news, so sector or market news is the place to check before reacting. If you prefer less day-to-day movement, Raffles Medical Group, Ascendas REIT, Mapletree Industrial, CapitaLand Integ. Comm. Trust and OCBC Bank have the highest chance of no big move.

Which parts can you rely on? Each kind of statement was tested on past data (results in section 5).

| | | | | |
|---|---|---|---|---|
| ✓ Prices and changes: fact (sections 1-2) | ○ News & signals: describe today, not a forecast (sections 1-2) | ✓ Normal 3-day swing: reliable, held 74 times in 100 (section 3) | ! Calmer than most: promising, still being confirmed (section 3) | ✗ Up-or-down lean: not reliable, even with ✓ (section 3) |

## All 15 stocks today

Ranked by today's news-and-signals reading, most positive first. Market-wide today: calm market, VIX below 15; this applies to all 15 and is not repeated below.

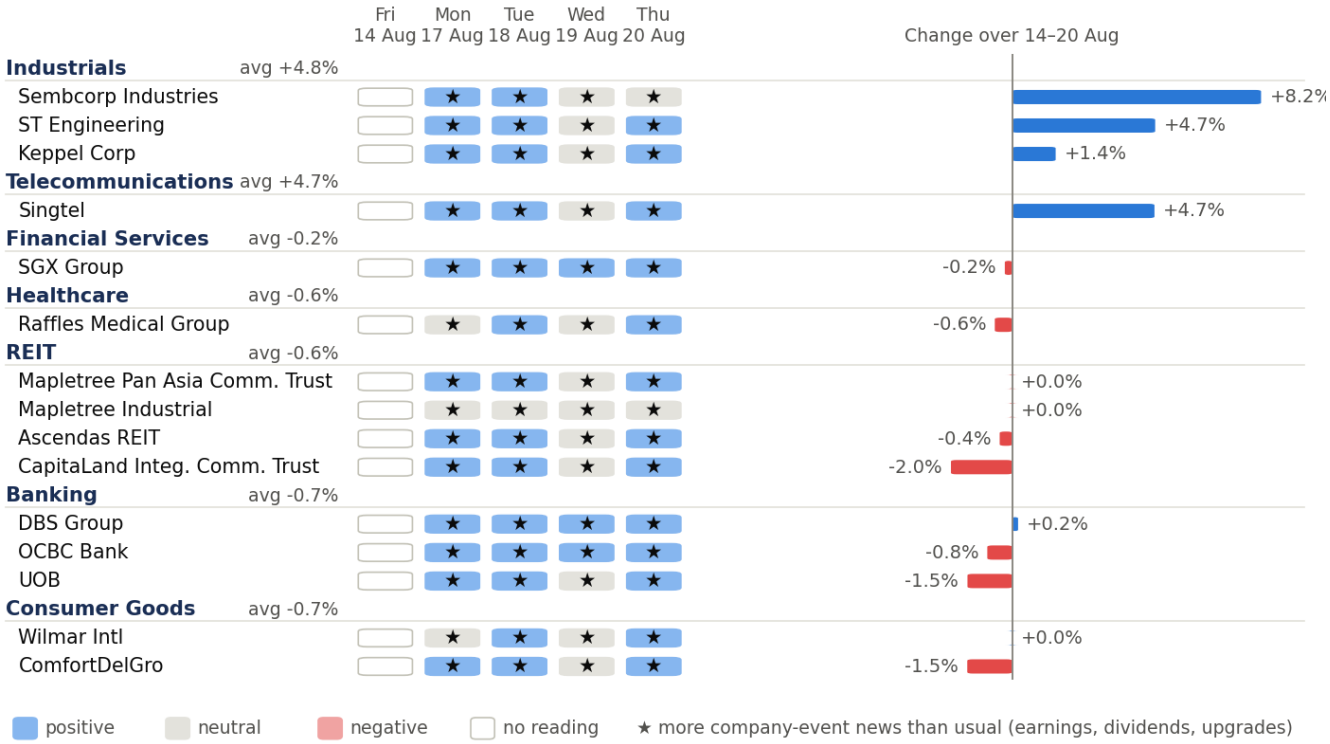

| # | Stock | Today | 14–20 Aug | News & signals | News today | Price chart | Price vs news |
|---|---|---|---|---|---|---|---|
| 1 | DBS Group □ | -0.2% | +0.2% | **Positive** | Mostly positive (50) | Weekly up · Above avg price | Not yet in the price |
| 2 | SGX Group □ □ | -1.0% | -0.2% | **Positive** | Mostly positive (50) | Weekly up · Above avg price | Price went the other way |
| 3 | OCBC Bank □ | -0.5% | -0.8% | **Positive** | Mostly positive (50) | Weekly up · Trend turned down · Above avg price | Not yet in the price |
| 4 | CapitaLand Integ. Comm. Trust □ | +0.4% | -2.0% | **Positive** | Mostly positive (29) | Above avg price | Not yet in the price |
| 5 | Ascendas REIT □ | +0.4% | -0.4% | **Positive** | Mostly positive (22) | — | Not yet in the price |
| 6 | Keppel Corp □ | +0.4% | +1.4% | **Positive** | Mostly positive (30) | Above avg price | Not yet in the price |
| 7 | ComfortDelGro □ | +0.0% | -1.5% | **Positive** | Mostly positive (38) | Trend turned down | Not yet in the price |
| 8 | UOB □ □ | -0.8% | -1.5% | **Positive** | Mixed (50) | Above avg price | Price went the other way |
| 9 | Singtel □ | +0.5% | +4.7% | **Positive** | Mixed (50) | Above avg price | Not yet in the price |
| 10 | ST Engineering □ □ | -0.8% | +4.7% | **Positive** | Mixed (49) | Above avg price | Price went the other way |
| 11 | Wilmar Intl □ | +0.5% | +0.0% | **Positive** | Mixed (24) | Above avg price | Not yet in the price |
| 12 | Mapletree Pan Asia Comm. | +0.8% | +0.0% | **Positive** | Mixed (21) | — | Price agreed |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| | Trust □ | | | | | | |
| 13 | Raffles Medical Group □ | +0.0% | -0.6% | **Positive** | Mixed (22) | Weekly down · Trend turned up | Not yet in the price |
| 14 | Sembcorp Industries □ □ | +0.2% | +8.2% | **Neutral** | Mostly negative (28) | Above avg price | No signal, little move |
| 15 | Mapletree Industrial □ | +0.0% | +0.0% | **Neutral** | Mostly negative (25) | Above avg price | No signal, little move |

The ranking describes today: in our tests it did not predict which stocks did better the next day, so it is not a list of stocks to pick. News today: the tone and number of company articles collected today. Price chart: chart signals that fired. Price vs news: whether today's price moved with the reading (a move within ±0.6%, a normal day, counts as no reaction). □ more company-event news than usual (earnings, dividends, upgrades). □ worth a closer look (4 today; meaning in the glossary).

## 2 · The last 5 trading days and what may explain them

Each square is one day's news-and-signals reading for a stock; the bar is its price change over 14–20 Aug. Stocks are grouped by sector, best sector first.

### Where today's news adds something

The stocks with a positive or negative news-and-signals reading today (□ first, strongest first).

The AI summaries mention a 'geopolitical backdrop' and 'political news volume': those two rules fire every day and cancel out, so they carry no information (section 5).

#### SGX Group Financial Services · -0.2% over 14–20 Aug

**In short (AI-written, checked)** SGX Group fell 0.2% over 14–20 Aug. The news today was mostly positive, but it does not explain the move. The forecast model expects a fall, though that signal is weak.
**What happened** Fell 0.2% over 14–20 Aug, including -1.9% on Tue 18 Aug. Today -1.0%.
**Today: news vs price** Positive reading, but the price fell 1.0%: the price went against the news. The forecast model sides with the price. (Pattern: Contradicted.)
**Last 5 days in context** Company news collected today was mostly positive; the price fell 0.2% over 14–20 Aug, against +0.8% for the 15 stocks on average. So it barely moved over the period.
**News today** 50 articles collected today: 25 positive, 5 negative, 20 neutral (mostly positive). Event tags: dividend, earnings, merger or acquisition.
**Headlines** + “SGX records all-time highs in revenue, net profit for FY2026” (The Business Times, 06 Aug) − “SGX’s record year masks Singapore’s equities challenge” (The Business Times, 12 Aug)
**Price chart** RSI 58, between 30 and 70: no unusually fast move; weekly trend up; price above its volume-weighted average.
**News & signals reading** Positive today (score +0.77; positive above +0.35, negative below −0.35), and on all 3 earlier recorded days. No single rule decides it.
**Rules behind the reading** Up: earnings/dividend headlines +0.20, positive company news +0.18, weekly trend up +0.15, above average price +0.02. Market-wide: calm market +0.21, political news +0.01 (unreliable, section 5).
**AI summary of the evidence (checked)** SGX maintains a positive outlook driven by a risk-on macro regime, record trading volumes, and a strong IPO pipeline, as highlighted in the "SGX securities turnover soars 70% to $45.8b in May" and "SGX has IPO pipeline of around 50 companies" headlines. Positive corporate events and robust revenue growth in FY2026 reinforce this stance, with the "SGX records all-time highs in revenue, net profit for FY2026" article underscoring earnings strength. However, elevated political news volume and negative macro headlines about the Iran conflict and oil price fears introduce downside pressure, and a sudden VIX spike could reverse the current risk-on sentiment.
**Forecast lean** Fall over the next 3 trading days (chance 72%); its normal 3-day swing is ±1.9%. Past record on this stock: ✓, but rise-or-fall calls marked ✓ were right only 43% in testing, so treat the direction as unknown.

## UOB Banking · -1.5% over 14–20 Aug

**In short (AI-written, checked)** UOB fell 1.5% over 14–20 Aug. The news today was mixed and does not clearly explain the move. The forecast model expects a rise, but that is a weak signal.
**What happened** Fell 1.5% over 14–20 Aug; its biggest day was Thu 20 Aug (-0.8%). Today -0.8%.
**Today: news vs price** Positive reading, but the price fell 0.8%: the price went against the news. The forecast model sides with the news. (Pattern: Lag.)
**Last 5 days in context** Company news collected today was mixed; the price fell 1.5% over 14–20 Aug, its 2 sector peers -0.3% on average, and the 15 stocks +0.8% on average. So there is no company story in the news, and the stock moved against the market; sector or wider news, outside this report's sources, is the place to look.
**News today** 50 articles collected today: 16 positive, 18 negative, 16 neutral (mixed). Event tags: dividend, earnings, merger or acquisition, upgrade.
**Headlines** + “United Overseas Bank (SGX:U11) Stock Gains Meet Lingering Margin Squeeze” (simplywall.st, 07 Aug) − “Stocks to watch: UOB, Singtel, UMS Integration, Koh Brothers Eco Engineering” (Business Times, 19 Aug)
**Price chart** RSI 39, between 30 and 70: no unusually fast move; price above its volume-weighted average.
**News & signals reading** Positive today (score +0.45; positive above +0.35, negative below −0.35), and on 2 of the 3 earlier recorded days. Without 'Earnings/dividend headlines' it would be neutral.
**Rules behind the reading** Up: earnings/dividend headlines +0.20, above average price +0.02. Market-wide: calm market +0.21, political news +0.01 (unreliable, section 5).
**AI summary of the evidence (checked)** Despite the rule-based model’s positive baseline driven by a positive geopolitical backdrop, risk-on macro regime, strong dividend outlook, and price above VWAP, the next-day return models flag political news volume and tone as negative. The RandomForest ML-model highlights RSI momentum (+0.162) and a low share of negative news (+0.052) as positive, while the LogReg model remains neutral. The 1Q FY2026 business update shows a 4% profit decline and lower net interest income, adding a cautionary note. Overall, the outlook stays positive at 68% confidence, though the internal contradiction around political news volume and the model split between linear and non-linear predictions suggest a mild risk of reversal.
**Forecast lean** Rise over the next 3 trading days (chance 99%); its normal 3-day swing is ±1.6%. Past record on this stock: ✓, but rise-or-fall calls marked ✓ were right only 43% in testing, so treat the direction as unknown.

## ST Engineering Industrials · +4.7% over 14–20 Aug

**In short (AI-written, checked)** ST Engineering rose 4.7% over 14–20 Aug. The news today was mixed and does not clearly explain the move. The forecast model expects a fall, but that is a weak signal.
**What happened** Rose 4.7% over 14–20 Aug, including +5.8% on Fri 14 Aug. Today -0.8%.
**Today: news vs price** Positive reading, but the price fell 0.8%: the price went against the news. The forecast model sides with the price. (Pattern: Contradicted.)
**Last 5 days in context** Company news collected today was mixed; the price rose 4.7% over 14–20 Aug, its 2 sector peers +4.8% on average, and the 15 stocks +0.8% on average. So there is no company story in the news, and the move looks sector-wide.
**News today** 49 articles collected today: 18 positive, 13 negative, 18 neutral (mixed). Event tags: dividend, earnings, management change.
**Headlines** + “Genting, Sembcorp, ST Engineering: Top Blue-Chip Stocks to Watch This Week” (The Smart Investor, 11 Aug) − “Stocks to watch: SIA, Elite UK Reit, Koh Brothers Eco Engineering” (Business Times, 18 Aug)
**Price chart** RSI 57, between 30 and 70: no unusually fast move; price above its volume-weighted average.
**News & signals reading** Positive today (score +0.45; positive above +0.35, negative below −0.35), and on 2 of the 3 earlier recorded days. Without 'Earnings/dividend headlines' it would be neutral.
**Rules behind the reading** Up: earnings/dividend headlines +0.20, above average price +0.02. Market-wide: calm market +0.21, political news +0.01 (unreliable, section 5).
**AI summary of the evidence (checked)** ST Engineering remains positive on the back of a positive geopolitical backdrop, a risk-on macro regime, and recent corporate events that lifted its shares 1.6% as reported by the Business Times, while the price sits above VWAP. However, the ML models predict a negative next-day return, citing negative political news tone, high political news volume, and weak RSI momentum as risk factors. Overall, the positive outlook is supported by strong corporate performance and favorable market sentiment, but caution is advised amid rising geopolitical tensions and negative macro headlines.
**Forecast lean** Fall over the next 3 trading days (chance 99%); its normal 3-day swing is ±3.5%. Past record on this stock: ✓, but rise-or-fall calls marked ✓ were right only 43% in testing, so treat the direction as unknown.

## 3 · The next 3 trading days: how much each stock may move

The normal swing and the calmer stocks have held up in testing. The up-or-down lean has not: even with ✓, a rise-or-fall call is no better than a guess.

| Stock | Normal 3-day swing | Calmer than most | Forecast lean | Chance | Record vs simple rule |
|---|---|---|---|---|---|
| Mapletree Industrial | ±0.6% | ✓ calmer | No big move | 99% | ±0 pts ✓ |
| Ascendas REIT | ±1.6% | ✓ calmer | No big move | >99% | ±0 pts ✓ |
| UOB | ±1.6% | | Rise | 99% | ±0 pts ✓ |
| CapitaLand Integ. Comm. Trust | ±1.8% | ✓ calmer | No big move | 99% | ±0 pts ✓ |
| Raffles Medical Group | ±1.9% | ✓ calmer | No big move | >99% | ±0 pts ✓ |
| DBS Group | ±1.9% | | No big move | 75% | ±0 pts ✓ |
| SGX Group | ±1.9% | | Fall | 72% | ±0 pts ✓ |
| Mapletree Pan Asia Comm. Trust | ±1.9% | | Rise | 99% | −100 pts ✗ |
| ComfortDelGro | ±1.9% | | No big move | 76% | ±0 pts ✓ |
| Singtel | ±2.6% | | Fall | 99% | −100 pts ✗ |
| OCBC Bank | ±2.9% | ✓ calmer | No big move | 96% | +100 pts ✓ |
| Wilmar Intl | ±2.9% | | Rise | 97% | +100 pts ✓ |
| Sembcorp Industries | ±2.9% | | Rise | 57% | ±0 pts ✓ |
| Keppel Corp | ±3.1% | | Fall | 97% | ±0 pts ✓ |
| ST Engineering | ±3.5% | | Fall | 99% | +100 pts ✓ |

Normal 3-day swing: about 2 times in 3 the 3-day change stays inside it (last 20 trading days). Calmer than most: the five highest chances of no big move. Forecast lean: the model's most likely 3-day outcome (rise above +1.04%, fall below −1.04%, otherwise no big move) and the probability it gave. Record vs simple rule: percentage points more (or fewer) of its calls on this stock that were right over the last 30 days than always guessing the stock's most common past outcome; ✓ no more than 5 points behind, ✗ further behind. Sorted calmest first.

### What these numbers are worth

- **Normal 3-day swing.** Held 74% of the time in 420 tests (about 68% expected). Use it as a yardstick: a 3-day move bigger than a stock's swing is unusual for that stock and worth checking the news for; it is not a signal by itself.
- **Calmer than most.** Raffles Medical Group, Ascendas REIT, Mapletree Industrial, CapitaLand Integ. Comm. Trust and OCBC Bank: the five with the highest chance of no big move. In tests over 31 trading days, the five picked this way moved more than 1% about 4 in 10 times, the other ten about 6 in 10 times. If you prefer less day-to-day movement, these have moved least often.
- **Up-or-down lean.** Only 15 live forecasts had matured by this date, too few to quote a record; treat every call as unproven.

## 4 · The system behind this report

Four stages run in sequence after every close. Every number on the pages above comes from one of them; nothing is written by hand.

| Stage | What it does for this report |
|---|---|
| **1 · Collect the day's facts** | Today's raw facts. 538 company news articles (each read as positive, negative or neutral by FinBERT, a finance language model) and 72 political articles; price-chart indicators (RSI, MACD, Bollinger bands, VWAP, weekly trend); the market backdrop (VIX 14.9, US yield spread); Singapore ETF options positioning (put/call 0.76). |
| **2 · Read the news and signals** | What the news and indicators say on top of the price itself: one reading per stock (sections 1–2), built in four layers. (1) Weighted rules score the day's evidence — the scores and rules on the cards. (2) Two independent machine-learning models re-read the same inputs as a second opinion. (3) A contradiction check compares all layers and flags internally mixed readings (named on the cards when strongly mixed). (4) An AI writer (an open-source model served by Groq) drafts the news summary; it may only phrase what the rules computed, and a summary that fails the checks is replaced by a fixed template. |
| **3 · Forecast the next 3 days** | The 3-day forecast and chance for every stock (section 3). Three model families (logistic regression, random forest, XGBoost) are re-evaluated every week in a champion–challenger setup. A replay of that weekly choice under 15 settings moved accuracy only between 53.8% and 54.6% (0–4 switches), and the pooled winner led per stock on just 4 of 15: switching added churn, not accuracy. The serving model is therefore pinned (random forest) and the weekly evaluation is kept as monitoring. Each forecast carries its own per-stock record — the ✓ / ✗ column. |
| **4 · Check and write the report** | Sorts each stock into one of 11 patterns (below; shown on the cards and table in plain words as 'price vs news'), flags what deserves a closer look (□), picks the cards, and draws the day's market read: where the moves were, whether company news, the sector or the whole market moved with them, and what the backdrop and the forecast add. Every kind of statement carries its tested record (section 5). An AI writer, the same model as stage 2, rewrites the code-written market read in plainer words and drafts each card's 'In short' line. It may not write a single digit (code fills in every number), and a draft that breaks any rule — no advice, no targets, no claimed certainty, no number or stock it was not given, no rise word next to a fall, no claim that the news explains a move the report says it does not, no more than little weight on the forecast, no figure in words, no claim against the stored price facts — is replaced by the template text. |

AI-written text in this report: the market read and 'In short' lines (stage 4) and the news summaries (stage 2), all checked; every number, table and verdict is computed by code. In the project's documentation the four stages are Tasks 1–4, 5, 6 and 7.

### Today's patterns: how news, price and forecast line up

| Pattern | Stocks today | Meaning |
|---|---|---|
| **Dormant (6)** | DBS Group, OCBC Bank, CapitaLand Integ. Comm. Trust, Ascendas REIT, ComfortDelGro, Raffles Medical Group | a slight lean in the signals; neither price nor model followed |
| **Muted, fading (2)** | Singtel, Keppel Corp | signals leaned one way, price barely moved; the model expects the opposite |
| **Contradicted (2)** | ST Engineering, SGX Group | price went against the signals and the model agrees with the price |
| **Lag (1)** | UOB | price went against the signals; the model sides with the signals |
| **Momentum (1)** | Mapletree Pan Asia Comm. Trust | news and price agreed; the model expects the move to continue |
| **Quiet (1)** | Mapletree Industrial | no directional signal today |
| **Model-only view (1)** | Sembcorp Industries | signals flat, but the model has a view |
| **Muted, pending (1)** | Wilmar Intl | signals leaned one way, price barely moved; the model still expects that direction |

The other patterns in the 11-pattern engine did not occur today; the full set is defined in the final report, Appendix C. The contradiction check rated 2 of 15 readings strongly mixed (named on the cards) and 13 mildly mixed today.

## 5 · What three months of testing show

Each part of the system was tested on the project's stored data before it was allowed into this report. Results across all 15 stocks; forecast records count only outcomes known by the report date, research results are from the whole project:

| What was tested | What we found | Verdict | What it means for you |
|---|---|---|---|
| **Can today's news and signals pick stocks?** | The ranking did not predict next-day returns against the other stocks (rank correlation -0.02 over 21 days). | ○ Describes only | Use it to understand the day, not to pick stocks |
| **Was the news reading balanced?** | An audit found one rule (company-event news) firing on 99.7% of readings, so readings leaned positive. Fixed on 21 Sep: positive readings 56% → 33%, with no loss of information. | ✓ Found and fixed | Readings are more balanced; negative ones stay rare |
| **Can the model forecast up or down?** | Only 15 live calls had matured by this date. With honest probabilities, RandomForest, XGBoost and logistic regression all scored 53.3–54.0% vs 53.3%. | ✗ Not reliable | Three-day direction is not predictable from these inputs |
| **Were its stated chances honest?** | Its calibration had been fitted on its own training rows. Refitted out-of-fold, no model says 90%. | ! Found and fixed | Never read a high chance as near-certain |
| **Does marking weak forecasts help?** | Only 15 live calls had matured by this date, too few to compare. | ! For 'no big move' only | Trust ✓ on 'no big move', never on a direction |
| **Does switching models weekly help?** | Replaying the weekly champion choice under 15 settings gave 53.8–54.6%: switching added churn, not accuracy. | ○ No gain | One model (RandomForest) is kept fixed |
| **How much will a stock move?** | The normal 3-day swing held 74% of the time (420 tests; about 68% expected). | ✓ Reliable | Judge whether a move is unusual for that stock |
| **Which stocks will be calmer?** | The five with the highest chance of no big move moved over 1% about 4 in 10 times, the others about 6 in 10 (31 test days). The rule was set after looking at the data. | ! Promising | A hint where less is likely to happen |
| **Does □ mean a bigger move?** | No. Next 3 days: flagged stocks moved 1.2% on average, the rest 1.3% (17 flags, 18 dates). | ○ Not a forecast | □ means read the card first |
| **What do seven years of prices say?** | A stock that beat the other 14 on a day tended to lag slightly the next day, 2019-2025 (rank correlation +0.071, t 9.8), but by less than trading costs. | ○ Real but small | Do not chase a one-day jump |

### Limitations

- About three months of data in one market phase: every rate above could change as more data arrives.
- News readings rarely turn negative: bearish rules fire less often and weigh less. No negative reading means no negative signal was found, not that there was no bad news.
- Free data: options data is one Singapore stock-market fund shared by all 15 stocks, and news publication times have not been checked against the report's cut-off.
- One political-news rule fires every day (it reads the classifier's confidence, not the tone), as does its counterweight; the two are summed and marked 'unreliable'.
- The news search often returns older articles, so only headlines from the last 30 days are shown; some stocks show none on a given day.

### Words used in this report

| Word | Meaning |
|---|---|
| **News & signals** | What today's news and indicators say on top of the price itself: positive, neutral or negative. It describes the day; the forecast is a separate model's job. |
| **News today** | The company articles collected on the day, each read as positive, negative or neutral by a finance language model (FinBERT). 'Mostly positive' means clearly more positive than negative articles. |
| **Normal day / big move** | A normal day: a one-day move within about ±0.6%, treated as the price not reacting. A big move (forecast): a three-day change beyond about ±1%. Both are half a standard deviation of past moves. |
| **RSI** | A 0-100 gauge of how fast the price has moved lately. Below 30 'oversold' (fell fast), above 70 'overbought' (rose fast). |
| **Average price (VWAP)** | The day's average price, weighted by how many shares traded at each price. |
| **Usual range (Bollinger band)** | The 20-day average price plus or minus two standard deviations; the price stays inside it on most days, so a close outside it is unusual. |
| **Trend turned (MACD)** | A short-term price average crossed a longer one. |
| **Singapore ETF options** | Bets traders place on a fund that tracks Singapore shares; more 'puts' means more people buying protection against a fall. The same for all 15 stocks. |
| **Normal 3-day swing** | How far the stock usually moves over three trading days (its recent daily volatility × √3); about 2 times in 3 the move stays inside it. A yardstick for whether a move is unusual. |
| **Calmer than most** | The five stocks with the highest chance of no big move in the forecast model's probabilities for the day. |
| **Forecast lean** | The forecast model's most likely outcome over the next three trading days: rise, fall or no big move, with the probability it gave. Probabilities are calibrated out-of-fold, so 50% means about half come true. |
| ✓✗□ □ | □ more company-event news than usual. □ worth a closer look: the price went against the news, or the news is silent while the model leans one way, and the model has a usable record on this stock. ✓ / ✗ the model's record on that stock is about as good as or better than / worse than always guessing its most common past outcome. |

*General information about 15 listed companies, generated automatically from stored data. It is not financial advice or a recommendation to deal in any security, and it takes no account of your circumstances. Past patterns do not guarantee future results.*
