# SGX Daily Signal Report

Tuesday 01 September 2026 · data to the close

**15 SGX stocks · 7 sectors**
Last 5 trading days: 26 Aug–01 Sep
Sections: 1 today · 2 news & last 5 days · 3 next 3 days · 4 system · 5 findings

## 1 · Today in 30 seconds

- Today the 15 stocks moved -0.8% on average (1 up, 13 down); over 26–01 Sep they moved -0.5%. Weakest: Financial Services (-1.8%), REIT (-1.3%) and Telecommunications (-0.7%); strongest: Banking (+0.3%) and Industrials (+0.0%).
- Biggest movers over 26–01 Sep: CapitaLand Integ. Comm. Trust (-2.1%), Ascendas REIT (-2.0%) and SGX Group (-1.8%). Ascendas REIT moved without a company news story; the move looks sector-wide. For CapitaLand Integ. Comm. Trust and SGX Group, the company news and the price disagree. See section 2.
- The market backdrop is normal (VIX 15.9), and Singapore ETF options are neutral (put/call 0.19).
- Today's news added a positive signal for DBS Group (the price went the other way), SGX Group (the price went the other way), UOB (not yet in the price), CapitaLand Integ. Comm. Trust (the price went the other way) and four more. See section 2.
- The forecast model leans towards a rise for four stocks and no big move for the rest (only Keppel Corp and Wilmar Intl with a ✓ record); normal 3-day swings run from ±0.7% (Mapletree Industrial) to ±3.0% (Wilmar Intl), so a bigger move than a stock's own swing would be unusual. See section 3.
- No stock is flagged □ today. The moves in Ascendas REIT came without company news, so sector or market news is the place to check before reacting. If you prefer less day-to-day movement, SGX Group, ST Engineering, Ascendas REIT, Mapletree Industrial and Mapletree Pan Asia Comm. Trust have the highest chance of no big move.

Drafted by code from the day's data and analysis; the AI writer (openai/gpt-oss-20b, the same model that writes the news summaries) checked it and kept the wording; every number was filled in by code and the text passed the report's checks.

Which parts can you rely on? Each kind of statement was tested on past data (results in section 5).

| | | | | |
|---|---|---|---|---|
| ✓ Prices and changes: fact (sections 1-2) | ○ News & signals: describe today, not a forecast (sections 1-2) | ✓ Normal 3-day swing: reliable, held 74 times in 100 (section 3) | ! Calmer than most: promising, still being confirmed (section 3) | ✗ Up-or-down lean: not reliable, even with ✓ (section 3) |

## All 15 stocks today

Ranked by today's news-and-signals reading, most positive first. Market-wide today: Singapore ETF options lean positive; this applies to all 15 and is not repeated below.

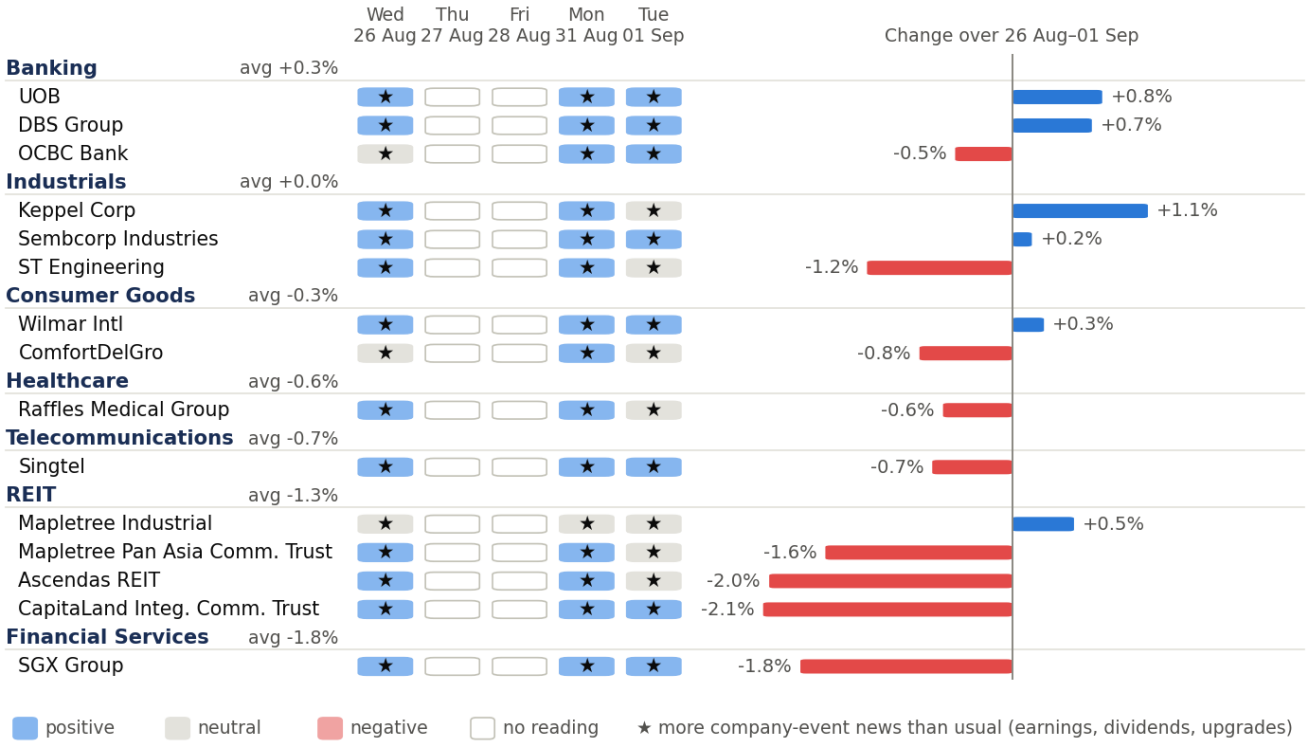

| # | Stock | Today | 26 Aug–01 Sep | News & signals | News today | Price chart | Price vs news |
|---|---|---|---|---|---|---|---|
| 1 | DBS Group □ | -0.6% | +0.7% | **Positive** | Mostly positive (50) | Weekly up · Above avg price | Price went the other way |
| 2 | SGX Group □ | -2.2% | -1.8% | **Positive** | Mostly positive (50) | Weekly up · Trend turned down · Above avg price | Price went the other way |
| 3 | UOB □ | -0.3% | +0.8% | **Positive** | Mixed (50) | Weekly up · Trend turned up · Above avg price | Not yet in the price |
| 4 | CapitaLand Integ. Comm. Trust □ | -0.8% | -2.1% | **Positive** | Mostly positive (30) | — | Price went the other way |
| 5 | OCBC Bank □ | -0.6% | -0.5% | **Positive** | Mixed (50) | Weekly up · Above avg price | Not yet in the price |
| 6 | Singtel □ | -1.8% | -0.7% | **Positive** | Mixed (46) | Above avg price | Price went the other way |
| 7 | Sembcorp Industries □ | +2.4% | +0.2% | **Positive** | Mixed (23) | Above avg price | Price agreed |
| 8 | Wilmar Intl □ | -2.1% | +0.3% | **Positive** | Mixed (21) | Above avg price | Price went the other way |
| 9 | ComfortDelGro □ | -0.8% | -0.8% | **Neutral** | Mixed (28) | — | Moved without a signal |
| 10 | Ascendas REIT □ | -1.6% | -2.0% | **Neutral** | Mixed (21) | — | Moved without a signal |
| 11 | Mapletree Pan Asia Comm. Trust □ | -0.8% | -1.6% | **Neutral** | Mixed (17) | — | Moved without a signal |
| 12 | Keppel Corp □ | -0.3% | +1.1% | **Neutral** | Mixed (29) | Above avg price | No signal, little move |
| 13 | ST Engineering □ | -1.9% | -1.2% | **Neutral** | Mixed (38) | Trend turned down | Moved without a signal |

| | | | | | | | |
|---|---|---|---|---|---|---|---|
| 14 | Raffles Medical Group □ | -0.6% | -0.6% | **Neutral** | Mixed (23) | Weekly down | No signal, little move |
| 15 | Mapletree Industrial □ | +0.0% | +0.5% | **Neutral** | Mostly negative (23) | Above avg price | No signal, little move |

The ranking describes today: in our tests it did not predict which stocks did better the next day, so it is not a list of stocks to pick. News today: the tone and number of company articles collected today. Price chart: chart signals that fired. Price vs news: whether today's price moved with the reading (a move within ±0.6%, a normal day, counts as no reaction). □ more company-event news than usual (earnings, dividends, upgrades). □ worth a closer look (none today; meaning in the glossary).

## 2 · The last 5 trading days and what may explain them

Each square is one day's news-and-signals reading for a stock; the bar is its price change over 26 Aug–01 Sep. Stocks are grouped by sector, best sector first.

### Where today's news adds something

The stocks with a positive or negative news-and-signals reading today (□ first, strongest first).

The AI summaries mention a 'geopolitical backdrop' and 'political news volume': those two rules fire every day and cancel out, so they carry no information (section 5).

#### Wilmar International Consumer Goods · +0.3% over 26 Aug–01 Sep

**In short (AI-written, checked)** Wilmar International fell 2.1% over 26–01 Sep. The news was mixed, but the price moved the other way, so the news does not explain the move. The last five days saw a small rise of +0.3%. The forecast model expects a rise with a 52% chance, but this signal is weak.
**What happened** Rose 0.3% over 26 Aug–01 Sep; its biggest day was Tue 01 Sep (-2.1%). Today -2.1%.
**Today: news vs price** Positive reading, but the price fell 2.1%: the price went against the news. The forecast model sides with the news. (Pattern: Lag.)
**Last 5 days in context** Company news collected today was mixed; the price rose 0.3% over 26 Aug–01 Sep, its sector peer ComfortDelGro -0.8%, and the 15 stocks -0.5% on average. So it barely moved over the period.
**News today** 21 articles collected today: 3 positive, 4 negative, 14 neutral (mixed). Event tags: dividend, earnings, merger or acquisition, upgrade.
**Price chart** RSI 49, between 30 and 70: no unusually fast move; price above its volume-weighted average.
**News & signals reading** Positive today (score +0.37; positive above +0.35, negative below −0.35), and on all 2 earlier recorded days. It needs both 'Earnings/dividend headlines' and the average-price signal: without either it would be neutral.
**Rules behind the reading** Up: earnings/dividend headlines +0.20, above average price +0.02. Market-wide: ETF options positive +0.14, political news +0.01 (unreliable, section 5).
**AI summary of the evidence (checked)** Despite a positive baseline driven by a positive geopolitical backdrop, corporate events, options market positioning, and price above VWAP, the next-day return models remain neutral, highlighting a mild contradiction. Higher news coverage volume and a favorable yield curve spread support the positive view, while elevated political news volume and negative news share dampen confidence. Recent macro headlines—such as the prolonged war in Iran and weakening Asian currencies—add a negative tone that tempers the outlook. Overall, the consensus leans positive but with caution, as the models and macro environment suggest potential volatility.
**Forecast lean** Rise over the next 3 trading days (chance 52%); its normal 3-day swing is ±3.0%. Past record on this stock: ✓, but rise-or-fall calls marked ✓ were right only 31% in testing, so treat the direction as unknown.

## DBS Group Banking · +0.7% over 26 Aug–01 Sep

**In short (AI-written, checked)** DBS Group slipped 0.6% over 26–01 Sep. The mostly positive news was not reflected in the price, so it does not explain the move. Over the last five days the stock barely moved +0.7%. The forecast model predicts no big move, a weak signal.
**What happened** Rose 0.7% over 26 Aug–01 Sep, including +1.6% on Mon 31 Aug. Today -0.6%.
**Today: news vs price** Positive reading, but the price fell 0.6%: the price went against the news. The forecast model has no clear view. (Pattern: Noise.)
**Last 5 days in context** Company news collected today was mostly positive; the price rose 0.7% over 26 Aug–01 Sep, its 2 sector peers +0.1% on average, and the 15 stocks -0.5% on average. So it barely moved over the period.
**News today** 50 articles collected today: 32 positive, 7 negative, 11 neutral (mostly positive). Event tags: dividend, earnings, management change, upgrade.
**Headlines** + “DBS sees choppy Q3 for STI as investors pivot from Singapore banks to listcos that are unloc…” (The Business Times, 07 Aug)
**Price chart** RSI 64, between 30 and 70: no unusually fast move; weekly trend up; price above its volume-weighted average.
**News & signals reading** Positive today (score +0.70; positive above +0.35, negative below −0.35), and on all 2 earlier recorded days. No single rule decides it.
**Rules behind the reading** Up: earnings/dividend headlines +0.20, positive company news +0.18, weekly trend up +0.15, above average price +0.02. Market-wide: ETF options positive +0.14, political news +0.01 (unreliable, section 5).
**AI summary of the evidence (checked)** DBS Group maintains a positive outlook driven by strong corporate earnings, record net profit, and dividend hikes, as reflected in recent headlines such as "DBS shares hit $50 record after 1% rise in Q2 profit" and "DBS Reports Record-High Net Profit and Raises Dividend by 33%". The rule-based model highlights a positive geopolitical backdrop, positive corporate events, and weekly trend confirmation, while ML-model analysis underscores the impact of positive news share (+0.253) and weekly trend (+0.229). However, elevated political news volume and negative macro headlines—like the prolonged war in Iran and weakening Asian currencies—introduce downside risk, and both ML models currently rate the next-day return as neutral, contrasting with the positive rule-based call. Overall, the consensus points to a favorable short-term bias, tempered by macro and political uncertainties.
**Forecast lean** No big move over the next 3 trading days (chance 53%); its normal 3-day swing is ±1.9%. Past record on this stock: about as good as a simple rule or better (✓), still only a weak signal.

## SGX Group Financial Services · -1.8% over 26 Aug–01 Sep

**In short (AI-written, checked)** SGX Group dropped 2.2% over 26–01 Sep. The mostly positive news and the price disagree, so the news does not explain the move. The company fell 1.8% over the last five days. The forecast model expects no big move, a weak signal.
**What happened** Fell 1.8% over 26 Aug–01 Sep, including -2.2% on Tue 01 Sep. Today -2.2%.
**Today: news vs price** Positive reading, but the price fell 2.2%: the price went against the news. The forecast model has no clear view. (Pattern: Noise.)
**Last 5 days in context** Company news collected today was mostly positive; the price fell 1.8% over 26 Aug–01 Sep, against -0.5% for the 15 stocks on average. So the company news and the price disagree.
**News today** 50 articles collected today: 26 positive, 6 negative, 18 neutral (mostly positive). Event tags: dividend, earnings, merger or acquisition, management change, upgrade.
**Headlines** + “SGX has IPO pipeline of around 50 companies in various stages of readiness amid record results” (The Business Times, 06 Aug) − “Shareholder Windfall: 3 SGX Stocks Boosting Dividends by 20%+” (The Smart Investor, 20 Aug)
**Price chart** RSI 52, between 30 and 70: no unusually fast move; weekly trend up; short-term trend turned down (MACD); price above its volume-weighted average.
**News & signals reading** Positive today (score +0.62; positive above +0.35, negative below −0.35), and on all 2 earlier recorded days. No single rule decides it. Also, the system's internal checks found the signals strongly mixed.
**Rules behind the reading** Up: earnings/dividend headlines +0.20, positive company news +0.18, weekly trend up +0.15, above average price +0.02. Down: trend turned down −0.07. Market-wide: ETF options positive +0.14, political news +0.01 (unreliable, section 5).
**AI summary of the evidence (checked)** SGX Group maintains a positive outlook driven by a positive geopolitical backdrop, strong corporate events, and robust weekly momentum, with ML-model confirming weekly trend and positive news share. Recent headlines such as "Securities turnover rises 70% in May" and "SGX’s record year masks Singapore’s equities challenge" reinforce the positive narrative. However, elevated political news volume, a MACD negative crossover, and negative ML-model signals—news coverage volume, price above VWAP, and negative news share—introduce caution. Despite these contradictions, the overall consensus remains positive.
**Forecast lean** No big move over the next 3 trading days (chance 87%); its normal 3-day swing is ±2.1%. Past record on this stock: below a simple rule (✗), so this call carries no weight.

## 3 · The next 3 trading days: how much each stock may move

The normal swing and the calmer stocks have held up in testing. The up-or-down lean has not: even with ✓, a rise-or-fall call is no better than a guess.

| Stock | Normal 3-day swing | Calmer than most | Forecast lean | Chance | Record vs simple rule |
|---|---|---|---|---|---|
| Mapletree Industrial | ±0.7% | ✓ calmer | No big move | 59% | ±0 pts ✓ |
| Raffles Medical Group | ±0.8% | | No big move | 51% | ±0 pts ✓ |
| Ascendas REIT | ±1.3% | ✓ calmer | No big move | 59% | +29 pts ✓ |
| Mapletree Pan Asia Comm. Trust | ±1.4% | ✓ calmer | No big move | 57% | −14 pts ✗ |
| CapitaLand Integ. Comm. Trust | ±1.5% | | No big move | 56% | +14 pts ✓ |
| UOB | ±1.7% | | Rise | 59% | −43 pts ✗ |
| ComfortDelGro | ±1.8% | | No big move | 56% | −14 pts ✗ |
| Keppel Corp | ±1.9% | | Rise | 51% | ±0 pts ✓ |
| DBS Group | ±1.9% | | No big move | 53% | ±0 pts ✓ |
| SGX Group | ±2.1% | ✓ calmer | No big move | 87% | −14 pts ✗ |
| Singtel | ±2.4% | | Rise | 58% | −71 pts ✗ |
| OCBC Bank | ±2.5% | | No big move | 50% | −14 pts ✗ |
| Sembcorp Industries | ±2.7% | | No big move | 56% | −14 pts ✗ |
| ST Engineering | ±2.9% | ✓ calmer | No big move | 76% | +57 pts ✓ |
| Wilmar Intl | ±3.0% | | Rise | 52% | +29 pts ✓ |

Normal 3-day swing: about 2 times in 3 the 3-day change stays inside it (last 20 trading days). Calmer than most: the five highest chances of no big move. Forecast lean: the model's most likely 3-day outcome (rise above +1.04%, fall below −1.04%, otherwise no big move) and the probability it gave. Record vs simple rule: percentage points more (or fewer) of its calls on this stock that were right over the last 30 days than always guessing the stock's most common past outcome; ✓ no more than 5 points behind, ✗ further behind. Sorted calmest first.

### What these numbers are worth

- **Normal 3-day swing.** Held 74% of the time in 420 tests (about 68% expected). Use it as a yardstick: a 3-day move bigger than a stock's swing is unusual for that stock and worth checking the news for; it is not a signal by itself.
- **Calmer than most.** SGX Group, ST Engineering, Ascendas REIT, Mapletree Industrial and Mapletree Pan Asia Comm. Trust: the five with the highest chance of no big move. In tests over 31 trading days, the five picked this way moved more than 1% about 4 in 10 times, the other ten about 6 in 10 times. If you prefer less day-to-day movement, these have moved least often.
- **Up-or-down lean.** Not reliable: right 47% of 105 past calls, against 61% for always guessing 'no big move'. Calls marked ✓ were right 49%, the rest 39%, but the gain is in 'no big move' calls (62% right); ✓ rise-or-fall calls were right only 31% of 32, so a ✓ never makes a direction likely. Before its probabilities were refitted, chances of 90% or more were right only 46% of the time.

## 4 · The system behind this report

Four stages run in sequence after every close. Every number on the pages above comes from one of them; nothing is written by hand.

| Stage | What it does for this report |
|---|---|
| **1 · Collect the day's facts** | Today's raw facts. 499 company news articles (each read as positive, negative or neutral by FinBERT, a finance language model) and 72 political articles; price-chart indicators (RSI, MACD, Bollinger bands, VWAP, weekly trend); the market backdrop (VIX 15.9, US yield spread); Singapore ETF options positioning (put/call 0.19). |
| **2 · Read the news and signals** | What the news and indicators say on top of the price itself: one reading per stock (sections 1–2), built in four layers. (1) Weighted rules score the day's evidence — the scores and rules on the cards. (2) Two independent machine-learning models re-read the same inputs as a second opinion. (3) A contradiction check compares all layers and flags internally mixed readings (named on the cards when strongly mixed). (4) An AI writer (an open-source model served by Groq) drafts the news summary; it may only phrase what the rules computed, and a summary that fails the checks is replaced by a fixed template. |
| **3 · Forecast the next 3 days** | The 3-day forecast and chance for every stock (section 3). Three model families (logistic regression, random forest, XGBoost) are re-evaluated every week in a champion–challenger setup. A replay of that weekly choice under 15 settings moved accuracy only between 53.8% and 54.6% (0–4 switches), and the pooled winner led per stock on just 4 of 15: switching added churn, not accuracy. The serving model is therefore pinned (random forest) and the weekly evaluation is kept as monitoring. Each forecast carries its own per-stock record — the ✓ / ✗ column. |
| **4 · Check and write the report** | Sorts each stock into one of 11 patterns (below; shown on the cards and table in plain words as 'price vs news'), flags what deserves a closer look (□), picks the cards, and draws the day's market read: where the moves were, whether company news, the sector or the whole market moved with them, and what the backdrop and the forecast add. Every kind of statement carries its tested record (section 5). An AI writer, the same model as stage 2, rewrites the code-written market read in plainer words and drafts each card's 'In short' line. It may not write a single digit (code fills in every number), and a draft that breaks any rule — no advice, no targets, no claimed certainty, no number or stock it was not given, no rise word next to a fall, no claim that the news explains a move the report says it does not, no more than little weight on the forecast, no figure in words, no claim against the stored price facts — is replaced by the template text. |

AI-written text in this report: the market read and 'In short' lines (stage 4) and the news summaries (stage 2), all checked; every number, table and verdict is computed by code. In the project's documentation the four stages are Tasks 1–4, 5, 6 and 7.

### Today's patterns: how news, price and forecast line up

| Pattern | Stocks today | Meaning |
|---|---|---|
| **Quiet (7)** | Mapletree Pan Asia Comm. Trust, Ascendas REIT, Mapletree Industrial, Keppel Corp, ST Engineering, ComfortDelGro, Raffles Medical Group | no directional signal today |
| **Noise (3)** | DBS Group, CapitaLand Integ. Comm. Trust, SGX Group | price went against the signals; the model has no clear view |
| **Lag (2)** | Singtel, Wilmar Intl | price went against the signals; the model sides with the signals |
| **Dormant (1)** | OCBC Bank | a slight lean in the signals; neither price nor model followed |
| **Muted, pending (1)** | UOB | signals leaned one way, price barely moved; the model still expects that direction |
| **Move complete (1)** | Sembcorp Industries | the signals played out today; nothing further expected |

The other patterns in the 11-pattern engine did not occur today; the full set is defined in the final report, Appendix C. The contradiction check rated 1 of 15 readings strongly mixed (named on the cards) and 7 mildly mixed today.

## 5 · What three months of testing show

Each part of the system was tested on the project's stored data before it was allowed into this report. Results across all 15 stocks; forecast records count only outcomes known by the report date, research results are from the whole project:

| What was tested | What we found | Verdict | What it means for you |
|---|---|---|---|
| **Can today's news and signals pick stocks?** | The ranking did not predict next-day returns against the other stocks (rank correlation -0.02 over 21 days). | ○ Describes only | Use it to understand the day, not to pick stocks |
| **Was the news reading balanced?** | An audit found one rule (company-event news) firing on 99.7% of readings, so readings leaned positive. Fixed on 21 Sep: positive readings 56% → 33%, with no loss of information. | ✓ Found and fixed | Readings are more balanced; negative ones stay rare |
| **Can the model forecast up or down?** | Live calls right 47% of 105 vs 61% for always 'no big move'. With honest probabilities, RandomForest, XGBoost and logistic regression all scored 53.3–54.0% vs 53.3%. | ✗ Not reliable | Three-day direction is not predictable from these inputs |
| **Were its stated chances honest?** | When the live model said 90% or more it was right 46% of the time (59 calls): its calibration had been fitted on its own training rows. Refitted out-of-fold, no model says 90%. | ! Found and fixed | Never read a high chance as near-certain |
| **Does marking weak forecasts help?** | ✓ calls right 49%, others 39%; the gain is in 'no big move' calls (62%). ✓ rise-or-fall calls: 31% of 32. | ! For 'no big move' only | Trust ✓ on 'no big move', never on a direction |
| **Does switching models weekly help?** | Replaying the weekly champion choice under 15 settings gave 53.8–54.6%: switching added churn, not accuracy. | ○ No gain | One model (RandomForest) is kept fixed |
| **How much will a stock move?** | The normal 3-day swing held 74% of the time (420 tests; about 68% expected). | ✓ Reliable | Judge whether a move is unusual for that stock |
| **Which stocks will be calmer?** | The five with the highest chance of no big move moved over 1% about 4 in 10 times, the others about 6 in 10 (31 test days). The rule was set after looking at the data. | ! Promising | A hint where less is likely to happen |
| **Does □ mean a bigger move?** | No. Next 3 days: flagged stocks moved 1.2% on average, the rest 1.3% (17 flags, 18 dates). | ○ Not a forecast | □ means read the card first |
| **What do seven years of prices say?** | A stock that beat the other 14 on a day tended to lag slightly the next day, 2019-2025 (rank correlation +0.071, t 9.8), but by less than trading costs. | ○ Real but small | Do not chase a one-day jump |

### Limitations

- About three months of data in one market phase: every rate above could change as more data arrives.
- News readings rarely turn negative: bearish rules fire less often and weigh less. No negative reading means no negative signal was found, not that there was no bad news.
- Free data: options data is one Singapore stock-market fund shared by all 15 stocks, and news publication times have not been checked against the report's cut-off.
- One political-news rule fires every day (it reads the classifier's confidence, not the tone), as does its counterweight; the two are summed and marked 'unreliable'.
- The news search often returns older articles, so only headlines from the last 30 days are shown; some stocks show none on a given day.

### Words used in this report

| Word | Meaning |
|---|---|
| **News & signals** | What today's news and indicators say on top of the price itself: positive, neutral or negative. It describes the day; the forecast is a separate model's job. |
| **News today** | The company articles collected on the day, each read as positive, negative or neutral by a finance language model (FinBERT). 'Mostly positive' means clearly more positive than negative articles. |
| **Normal day / big move** | A normal day: a one-day move within about ±0.6%, treated as the price not reacting. A big move (forecast): a three-day change beyond about ±1%. Both are half a standard deviation of past moves. |
| **RSI** | A 0-100 gauge of how fast the price has moved lately. Below 30 'oversold' (fell fast), above 70 'overbought' (rose fast). |
| **Average price (VWAP)** | The day's average price, weighted by how many shares traded at each price. |
| **Usual range (Bollinger band)** | The 20-day average price plus or minus two standard deviations; the price stays inside it on most days, so a close outside it is unusual. |
| **Trend turned (MACD)** | A short-term price average crossed a longer one. |
| **Singapore ETF options** | Bets traders place on a fund that tracks Singapore shares; more 'puts' means more people buying protection against a fall. The same for all 15 stocks. |
| **Normal 3-day swing** | How far the stock usually moves over three trading days (its recent daily volatility × √3); about 2 times in 3 the move stays inside it. A yardstick for whether a move is unusual. |
| **Calmer than most** | The five stocks with the highest chance of no big move in the forecast model's probabilities for the day. |
| **Forecast lean** | The forecast model's most likely outcome over the next three trading days: rise, fall or no big move, with the probability it gave. Probabilities are calibrated out-of-fold, so 50% means about half come true. |
| ✓✗□ □ | □ more company-event news than usual. □ worth a closer look: the price went against the news, or the news is silent while the model leans one way, and the model has a usable record on this stock. ✓ / ✗ the model's record on that stock is about as good as or better than / worse than always guessing its most common past outcome. |

*General information about 15 listed companies, generated automatically from stored data. It is not financial advice or a recommendation to deal in any security, and it takes no account of your circumstances. Past patterns do not guarantee future results.*
