SGX Daily Signal Report

Friday 04 September 2026 · data to the close

15 SGX stocks · 7 sectors
Last 5 trading days: 31 Aug–04 Sep
Sections: 1 today · 2 news & last 5 days · 3 next 3 days · 4 system · 5 findings

1 · Today in 30 seconds

- **Today.** Today the 15 stocks moved +0.5% on average (11 up, 3 down); over 31–04 Sep they moved +0.3%. Weakest: REIT (-1.5%), Financial Services (-0.8%) and Healthcare (-0.6%); strongest: Banking (+3.4%) and Industrials (+0.3%).
- **Why.** Biggest movers over 31–04 Sep: OCBC Bank (+3.9%), DBS Group (+3.3%) and Mapletree Pan Asia Comm. Trust (-3.1%). OCBC Bank moved without a company news story; the move looks sector-wide. Mapletree Pan Asia Comm. Trust moved against the market without a company news story. For DBS Group, the company news and the price point the same way. See section 2.
- **Backdrop.** The market backdrop is calm (VIX 14.2), and Singapore ETF options are neutral (put/call 0.20).
- **New today.** Today's news added a positive signal for SGX Group (already in the price), DBS Group (already in the price), Keppel Corp (not yet in the price), CapitaLand Integ. Comm. Trust (already in the price) and eleven more. See section 2.
- **Next 3 days.** The forecast model leans towards a rise for eight stocks and no big move for the rest (only DBS Group and Raffles Medical Group with a ✓ record); normal 3-day swings run from ±0.8% (Mapletree Industrial) to ±3.0% (Wilmar Intl), so a bigger move than a stock's own swing would be unusual. See section 3.
- **For you.** No stock is flagged □ today. The moves in OCBC Bank and Mapletree Pan Asia Comm. Trust came without company news, so sector or market news is the place to check before reacting. If you prefer less day-to-day movement, Mapletree Pan Asia Comm. Trust, ST Engineering, CapitaLand Integ. Comm. Trust, Mapletree Industrial and Ascendas REIT have the highest chance of no big move.

Which parts can you rely on? Each kind of statement was tested on past data (results in section 5).

✓ Prices and changes: fact (sections 1-2)	○ News & signals: describe today, not a forecast (sections 1-2)	✓ Normal 3-day swing: reliable, held 74 times in 100 (section 3)	! Calmer than most: promising, still being confirmed (section 3)	✗ Up-or-down lean: not reliable, even with ✓ (section 3)

All 15 stocks today

Ranked by today's news-and-signals reading, most positive first. Market-wide today: calm market, VIX below 15; Singapore ETF options lean positive; this applies to all 15 and is not repeated below.

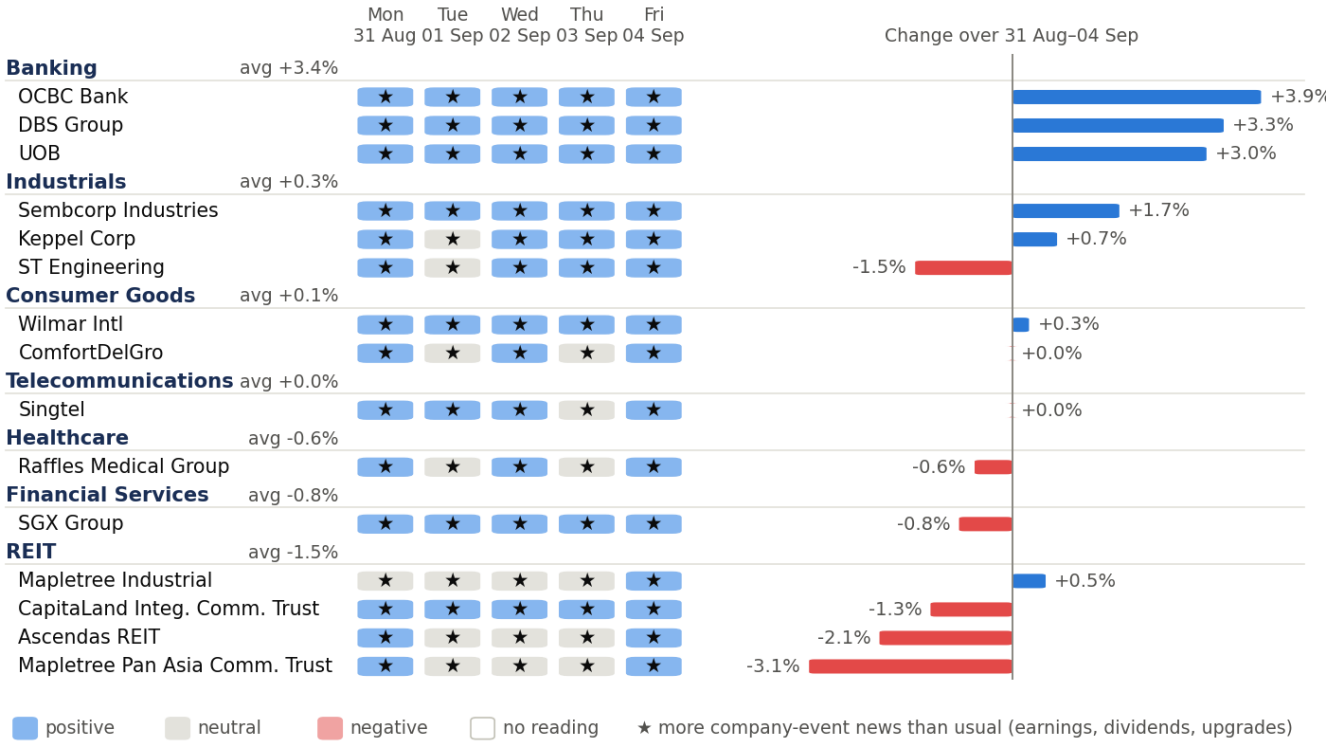

#	Stock	Today	31 Aug–04 Sep	News & signals	News today	Price chart	Price vs news
1	SGX Group □	+1.2%	-0.8%	**Positive**	Mostly positive (50)	Weekly up · Above avg price	Price agreed
2	DBS Group □	+0.9%	+3.3%	**Positive**	Mostly positive (50)	Overbought · Above range · Weekly up · Above avg price	Price agreed
3	Keppel Corp □	+0.5%	+0.7%	**Positive**	Mostly positive (25)	Above avg price	Not yet in the price
4	ST Engineering □	+0.5%	-1.5%	**Positive**	Mostly positive (35)	—	Not yet in the price
5	CapitaLand Integ. Comm. Trust □	+0.9%	-1.3%	**Positive**	Mostly positive (25)	—	Price agreed
6	Ascendas REIT □	+0.4%	-2.1%	**Positive**	Mostly positive (20)	—	Not yet in the price
7	UOB □	+0.6%	+3.0%	**Positive**	Mixed (46)	Weekly up · Above avg price	Price agreed
8	Singtel □	+1.8%	+0.0%	**Positive**	Mixed (35)	Trend turned up · Above avg price	Price agreed
9	ComfortDelGro □	+0.0%	+0.0%	**Positive**	Mixed (29)	Above avg price	Not yet in the price
10	Sembcorp Industries □	-1.1%	+1.7%	**Positive**	Mixed (21)	Above avg price	Price went the other way
11	Wilmar Intl □	-0.5%	+0.3%	**Positive**	Mixed (21)	Above avg price	Not yet in the price
12	Raffles Medical Group □	-0.6%	-0.6%	**Positive**	Mostly positive (18)	Weekly down	Not yet in the price
13	OCBC Bank □	+1.1%	+3.9%	**Positive**	Mixed (50)	Overbought · Above range · Weekly up ·	Price agreed

						Above avg price	
14	Mapletree Pan Asia Comm. Trust □	+0.8%	-3.1%	**Positive**	Mixed (14)	Weekly down · Below range	Price agreed
15	Mapletree Industrial □	+0.5%	+0.5%	**Positive**	Mostly negative (16)	Above avg price	Not yet in the price

The ranking describes today: in our tests it did not predict which stocks did better the next day, so it is not a list of stocks to pick. News today: the tone and number of company articles collected today. Price chart: chart signals that fired. Price vs news: whether today's price moved with the reading (a move within ±0.6%, a normal day, counts as no reaction). □ more company-event news than usual (earnings, dividends, upgrades). □ worth a closer look (none today; meaning in the glossary).

2 · The last 5 trading days and what may explain them

Each square is one day's news-and-signals reading for a stock; the bar is its price change over 31 Aug–04 Sep. Stocks are grouped by sector, best sector first.

Where today's news adds something

The stocks with a positive or negative news-and-signals reading today (□ first, strongest first).

The AI summaries mention a 'geopolitical backdrop' and 'political news volume': those two rules fire every day and cancel out, so they carry no information (section 5).

DBS Group Banking · +3.3% over 31 Aug–04 Sep

In short (AI-written, checked) DBS Group rose 3.3% over 31–04 Sep. The news today was mostly positive and already in the price, so the move aligns with the news. The forecast model says a rise with a 58% chance, but its record is only a weak signal.
What happened Rose 3.3% over 31 Aug–04 Sep; its biggest day was Mon 31 Aug (+1.6%). Today +0.9%.
Today: news vs price Positive reading and the price rose 0.9%, more than a normal day's ±0.6%: the news already shows in the price. The forecast model expects the move to continue. (Pattern: Momentum.)
Last 5 days in context Company news collected today was mostly positive; the price rose 3.3% over 31 Aug–04 Sep, its 2 sector peers +3.4% on average, and the 15 stocks +0.3% on average. So the company news and the price point the same way, and the move looks sector-wide.
News today 50 articles collected today: 30 positive, 7 negative, 13 neutral (mostly positive). Event tags: dividend, earnings, management change, upgrade.
Headlines + “Are Local Banks Dangerously Overvalued? What DBS, OCBC, and UOB Aren't Telling Shareholders” (The Smart Investor, 02 Sep)
Price chart RSI 70, above 70: the price rose fast ('overbought'); price above its usual range (Bollinger band); weekly trend up; price above its volume-weighted average.
News & signals reading Positive today (score +0.77; positive above +0.35, negative below −0.35), and on all 4 earlier recorded days. No single rule decides it.
Rules behind the reading Up: above usual range +0.24, earnings/dividend headlines +0.20, positive company news +0.18, weekly trend up +0.15, above average price +0.02. Down: RSI overbought −0.38. Market-wide: calm market +0.21, ETF options positive +0.14, political news +0.01 (unreliable, section 5).
AI summary of the evidence (checked) DBS Group remains positive on the back of strong earnings, a record $50 share price, and a $0.50 special dividend, all underscored by a risk-on macro regime and low VIX levels. Positive geopolitical backdrop, price above the Bollinger upper band, and positive corporate events further reinforce the upside, while the ML-model-derived macro regime signal adds corroborating weight. However, the RSI overbought signal and elevated political news volume introduce a cautionary note, suggesting a potential pullback if market sentiment shifts. Overall, the consensus points to a favorable next-day return, tempered by the identified contradictions.
Forecast lean Rise over the next 3 trading days (chance 58%); its normal 3-day swing is ±1.7%. Past record on this stock: ✓, but rise-or-fall calls marked ✓ were right only 29% in testing, so treat the direction as unknown.

Raffles Medical Group Healthcare · -0.6% over 31 Aug–04 Sep

In short (AI-written, checked) Raffles Medical Group fell 0.6% over 31–04 Sep. The news today is mostly positive but not yet in the price, and the move barely moved over the period. The forecast model predicts a rise with a 51% chance, yet its record is only a weak signal.
What happened Fell 0.6% over 31 Aug–04 Sep; its biggest day was Thu 03 Sep (+0.6%). Today -0.6%.
Today: news vs price Positive reading, but the price fell 0.6%, within a normal day's ±0.6%: the news has not shown up in the price. The forecast model still expects that direction. (Pattern: Muted, pending.)
Last 5 days in context Company news collected today was mostly positive; the price fell 0.6% over 31 Aug–04 Sep, against +0.3% for the 15 stocks on average. So it barely moved over the period.
News today 18 articles collected today: 7 positive, 1 negative, 10 neutral (mostly positive). Event tags: earnings, merger or acquisition, profit warning.
Price chart RSI 33, between 30 and 70: no unusually fast move; weekly trend down.
News & signals reading Positive today (score +0.54; positive above +0.35, negative below −0.35), and on 2 of the 4 earlier recorded days. Without 'Earnings/dividend headlines' it would be neutral.
Rules behind the reading Up: earnings/dividend headlines +0.20, positive company news +0.18. Down: weekly trend down −0.15, warning/downgrade headlines −0.06. Market-wide: calm market +0.21, ETF options positive +0.14, political news +0.01 (unreliable, section 5).
AI summary of the evidence (checked) Raffles Medical Group remains positive on the back of a risk-on macro regime and strong corporate momentum, highlighted by directors increasing stakes and a 87.5% jump in 2HFY2022 earnings. The rule-based model flags a positive geopolitical backdrop and positive corporate events as decisive drivers, while ML-model analysis confirms momentum via a high RSI and favorable political news tone. However, elevated political news volume, a negative weekly timeframe, and a downgrade from analysts temper the outlook, with put/call volume ratio and weekly trend confirmation adding subtle negative pressure. Overall, the consensus leans positive but with caution around potential volatility if geopolitical tensions or margin concerns widen.
Forecast lean Rise over the next 3 trading days (chance 51%); its normal 3-day swing is ±0.9%. Past record on this stock: ✓, but rise-or-fall calls marked ✓ were right only 29% in testing, so treat the direction as unknown.

SGX Group Financial Services · -0.8% over 31 Aug–04 Sep

In short (AI-written, checked) SGX Group fell 0.8% over 31–04 Sep. The news today is mostly positive and already in the price, yet the move barely moved over the period. The forecast model predicts a rise with a 56% chance, but its record is worse than a simple rule, so it deserves little weight.
What happened Fell 0.8% over 31 Aug–04 Sep, including -2.2% on Tue 01 Sep. Today +1.2%.
Today: news vs price Positive reading and the price rose 1.2%, more than a normal day's ±0.6%: the news already shows in the price. The forecast model expects the move to continue. (Pattern: Momentum.)
Last 5 days in context Company news collected today was mostly positive; the price fell 0.8% over 31 Aug–04 Sep, against +0.3% for the 15 stocks on average. So it barely moved over the period.
News today 50 articles collected today: 21 positive, 7 negative, 22 neutral (mostly positive). Event tags: dividend, earnings, merger or acquisition, upgrade.
Headlines + “SGX has IPO pipeline of around 50 companies in various stages of readiness amid record results” (The Business Times, 06 Aug) − “Shareholder Windfall: 3 SGX Stocks Boosting Dividends by 20%+” (The Smart Investor, 20 Aug)
Price chart RSI 57, between 30 and 70: no unusually fast move; weekly trend up; price above its volume-weighted average.
News & signals reading Positive today (score +0.91; positive above +0.35, negative below −0.35), and on all 4 earlier recorded days. No single rule decides it.
Rules behind the reading Up: earnings/dividend headlines +0.20, positive company news +0.18, weekly trend up +0.15, above average price +0.02. Market-wide: calm market +0.21, ETF options positive +0.14, political news +0.01 (unreliable, section 5).
AI summary of the evidence (checked) SGX remains positive on a backdrop of risk-on macro conditions, positive geopolitical sentiment, and a series of positive corporate events, reinforced by strong weekly momentum and a low VIX of 14.19. the ML models' explanations highlight VIX (+0.246) and political news tone (+0.083) as key drivers, while the rule-based model underscores elevated political news volume as a negative concern. Recent headlines such as the record-year performance of SGX and the growing IPO pipeline suggest continued growth, though the political escalation in the Middle East and Iran could temper sentiment. Overall, the positive outlook is tempered by internal contradictions, but the consensus leans toward a positive next-day return.
Forecast lean Rise over the next 3 trading days (chance 56%); its normal 3-day swing is ±2.0%. Past record on this stock: below a simple rule (✗), so this call carries no weight.

3 · The next 3 trading days: how much each stock may move

The normal swing and the calmer stocks have held up in testing. The up-or-down lean has not: even with ✓, a rise-or-fall call is no better than a guess.

Stock	Normal 3-day swing	Calmer than most	Forecast lean	Chance	Record vs simple rule
Mapletree Industrial	±0.8%	✓ calmer	No big move	56%	±0 pts ✓
Raffles Medical Group	±0.9%		Rise	51%	±0 pts ✓
Ascendas REIT	±1.2%	✓ calmer	No big move	55%	+22 pts ✓
Mapletree Pan Asia Comm. Trust	±1.4%	✓ calmer	No big move	83%	−11 pts ✗
CapitaLand Integ. Comm. Trust	±1.5%	✓ calmer	No big move	57%	+11 pts ✓
UOB	±1.7%		Rise	55%	−33 pts ✗
DBS Group	±1.7%		Rise	58%	±0 pts ✓
ComfortDelGro	±1.8%		Rise	57%	−22 pts ✗
Keppel Corp	±1.8%		Rise	51%	−22 pts ✗
SGX Group	±2.0%		Rise	56%	−11 pts ✗
Singtel	±2.3%		Rise	55%	−44 pts ✗
OCBC Bank	±2.4%		Rise	59%	−11 pts ✗
Sembcorp Industries	±2.8%		No big move	54%	±0 pts ✓
ST Engineering	±2.9%	✓ calmer	No big move	60%	+44 pts ✓
Wilmar Intl	±3.0%		No big move	51%	+33 pts ✓

Normal 3-day swing: about 2 times in 3 the 3-day change stays inside it (last 20 trading days). Calmer than most: the five highest chances of no big move. Forecast lean: the model's most likely 3-day outcome (rise above +1.04%, fall below −1.04%, otherwise no big move) and the probability it gave. Record vs simple rule: percentage points more (or fewer) of its calls on this stock that were right over the last 30 days than always guessing the stock's most common past outcome; ✓ no more than 5 points behind, ✗ further behind. Sorted calmest first.

What these numbers are worth

- **Normal 3-day swing.** Held 74% of the time in 420 tests (about 68% expected). Use it as a yardstick: a 3-day move bigger than a stock's swing is unusual for that stock and worth checking the news for; it is not a signal by itself.
- **Calmer than most.** Mapletree Pan Asia Comm. Trust, ST Engineering, CapitaLand Integ. Comm. Trust, Mapletree Industrial and Ascendas REIT: the five with the highest chance of no big move. In tests over 31 trading days, the five picked this way moved more than 1% about 4 in 10 times, the other ten about 6 in 10 times. If you prefer less day-to-day movement, these have moved least often.
- **Up-or-down lean.** Not reliable: right 47% of 135 past calls, against 58% for always guessing 'no big move'. Calls marked ✓ were right 51%, the rest 40%, but the gain is in 'no big move' calls (64% right); ✓ rise-or-fall calls were right only 29% of 34, so a ✓ never makes a direction likely. Before its probabilities were refitted, chances of 90% or more were right only 46% of the time.

4 · The system behind this report

Four stages run in sequence after every close. Every number on the pages above comes from one of them; nothing is written by hand.

Stage	What it does for this report
1 · Collect the day's facts	Today's raw facts. 455 company news articles (each read as positive, negative or neutral by FinBERT, a finance language model) and 72 political articles; price-chart indicators (RSI, MACD, Bollinger bands, VWAP, weekly trend); the market backdrop (VIX 14.2, US yield spread); Singapore ETF options positioning (put/call 0.20).
2 · Read the news and signals	What the news and indicators say on top of the price itself: one reading per stock (sections 1–2), built in four layers. (1) Weighted rules score the day's evidence — the scores and rules on the cards. (2) Two independent machine-learning models re-read the same inputs as a second opinion. (3) A contradiction check compares all layers and flags internally mixed readings (named on the cards when strongly mixed). (4) An AI writer (an open-source model served by Groq) drafts the news summary; it may only phrase what the rules computed, and a summary that fails the checks is replaced by a fixed template.
3 · Forecast the next 3 days	The 3-day forecast and chance for every stock (section 3). Three model families (logistic regression, random forest, XGBoost) are re-evaluated every week in a champion–challenger setup. A replay of that weekly choice under 15 settings moved accuracy only between 53.8% and 54.6% (0–4 switches), and the pooled winner led per stock on just 4 of 15: switching added churn, not accuracy. The serving model is therefore pinned (random forest) and the weekly evaluation is kept as monitoring. Each forecast carries its own per-stock record — the ✓ / ✗ column.
4 · Check and write the report	Sorts each stock into one of 11 patterns (below; shown on the cards and table in plain words as 'price vs news'), flags what deserves a closer look (□), picks the cards, and draws the day's market read: where the moves were, whether company news, the sector or the whole market moved with them, and what the backdrop and the forecast add. Every kind of statement carries its tested record (section 5). An AI writer, the same model as stage 2, rewrites the code-written market read in plainer words and drafts each card's 'In short' line. It may not write a single digit (code fills in every number), and a draft that breaks any rule — no advice, no targets, no claimed certainty, no number or stock it was not given, no rise word next to a fall, no claim that the news explains a move the report says it does not, no more than little weight on the forecast, no figure in words, no claim against the stored price facts — is replaced by the template text.

AI-written text in this report: the market read and 'In short' lines (stage 4) and the news summaries (stage 2), all checked; every number, table and verdict is computed by code. In the project's documentation the four stages are Tasks 1–4, 5, 6 and 7.

Today's patterns: how news, price and forecast line up

Pattern	Stocks today	Meaning
Momentum (5)	DBS Group, OCBC Bank, UOB, Singtel, SGX Group	news and price agreed; the model expects the move to continue
Dormant (4)	Ascendas REIT, Mapletree Industrial, ST Engineering, Wilmar Intl	a slight lean in the signals; neither price nor model followed
Muted, pending (3)	Keppel Corp, ComfortDelGro, Raffles Medical Group	signals leaned one way, price barely moved; the model still expects that direction
Move complete (2)	CapitaLand Integ. Comm. Trust, Mapletree Pan Asia Comm. Trust	the signals played out today; nothing further expected
Noise (1)	Sembcorp Industries	price went against the signals; the model has no clear view

The other patterns in the 11-pattern engine did not occur today; the full set is defined in the final report, Appendix C. The contradiction check rated 2 of 15 readings strongly mixed (named on the cards) and 12 mildly mixed today.

5 · What three months of testing show

Each part of the system was tested on the project's stored data before it was allowed into this report. Results across all 15 stocks; forecast records count only outcomes known by the report date, research results are from the whole project:

What was tested	What we found	Verdict	What it means for you
Can today's news and signals pick stocks?	The ranking did not predict next-day returns against the other stocks (rank correlation -0.02 over 21 days).	○ Describes only	Use it to understand the day, not to pick stocks
Was the news reading balanced?	An audit found one rule (company-event news) firing on 99.7% of readings, so readings leaned positive. Fixed on 21 Sep: positive readings 56% → 33%, with no loss of information.	✓ Found and fixed	Readings are more balanced; negative ones stay rare
Can the model forecast up or down?	Live calls right 47% of 135 vs 58% for always 'no big move'. With honest probabilities, RandomForest, XGBoost and logistic regression all scored 53.3–54.0% vs 53.3%.	✗ Not reliable	Three-day direction is not predictable from these inputs
Were its stated chances honest?	When the live model said 90% or more it was right 46% of the time (59 calls): its calibration had been fitted on its own training rows. Refitted out-of-fold, no model says 90%.	! Found and fixed	Never read a high chance as near-certain
Does marking weak forecasts help?	✓ calls right 51%, others 40%; the gain is in 'no big move' calls (64%). ✓ rise-or-fall calls: 29% of 34.	! For 'no big move' only	Trust ✓ on 'no big move', never on a direction
Does switching models weekly help?	Replaying the weekly champion choice under 15 settings gave 53.8–54.6%: switching added churn, not accuracy.	○ No gain	One model (RandomForest) is kept fixed
How much will a stock move?	The normal 3-day swing held 74% of the time (420 tests; about 68% expected).	✓ Reliable	Judge whether a move is unusual for that stock
Which stocks will be calmer?	The five with the highest chance of no big move moved over 1% about 4 in 10 times, the others about 6 in 10 (31 test days). The rule was set after looking at the data.	! Promising	A hint where less is likely to happen
Does □ mean a bigger move?	No. Next 3 days: flagged stocks moved 1.2% on average, the rest 1.3% (17 flags, 18 dates).	○ Not a forecast	□ means read the card first
What do seven years of prices say?	A stock that beat the other 14 on a day tended to lag slightly the next day, 2019-2025 (rank correlation +0.071, t 9.8), but by less than trading costs.	○ Real but small	Do not chase a one-day jump

Limitations

- About three months of data in one market phase: every rate above could change as more data arrives.
- News readings rarely turn negative: bearish rules fire less often and weigh less. No negative reading means no negative signal was found, not that there was no bad news.
- Free data: options data is one Singapore stock-market fund shared by all 15 stocks, and news publication times have not been checked against the report's cut-off.
- One political-news rule fires every day (it reads the classifier's confidence, not the tone), as does its counterweight; the two are summed and marked 'unreliable'.
- The news search often returns older articles, so only headlines from the last 30 days are shown; some stocks show none on a given day.

Words used in this report

Word	Meaning
News & signals	What today's news and indicators say on top of the price itself: positive, neutral or negative. It describes the day; the forecast is a separate model's job.
News today	The company articles collected on the day, each read as positive, negative or neutral by a finance language model (FinBERT). 'Mostly positive' means clearly more positive than negative articles.
Normal day / big move	A normal day: a one-day move within about ±0.6%, treated as the price not reacting. A big move (forecast): a three-day change beyond about ±1%. Both are half a standard deviation of past moves.
RSI	A 0-100 gauge of how fast the price has moved lately. Below 30 'oversold' (fell fast), above 70 'overbought' (rose fast).
Average price (VWAP)	The day's average price, weighted by how many shares traded at each price.
Usual range (Bollinger band)	The 20-day average price plus or minus two standard deviations; the price stays inside it on most days, so a close outside it is unusual.
Trend turned (MACD)	A short-term price average crossed a longer one.
Singapore ETF options	Bets traders place on a fund that tracks Singapore shares; more 'puts' means more people buying protection against a fall. The same for all 15 stocks.
Normal 3-day swing	How far the stock usually moves over three trading days (its recent daily volatility × √3); about 2 times in 3 the move stays inside it. A yardstick for whether a move is unusual.
Calmer than most	The five stocks with the highest chance of no big move in the forecast model's probabilities for the day.
Forecast lean	The forecast model's most likely outcome over the next three trading days: rise, fall or no big move, with the probability it gave. Probabilities are calibrated out-of-fold, so 50% means about half come true.
✓✗□ □	□ more company-event news than usual. □ worth a closer look: the price went against the news, or the news is silent while the model leans one way, and the model has a usable record on this stock. ✓ / ✗ the model's record on that stock is about as good as or better than / worse than always guessing its most common past outcome.

General information about 15 listed companies, generated automatically from stored data. It is not financial advice or a recommendation to deal in any security, and it takes no account of your circumstances. Past patterns do not guarantee future results.
