SGX Daily Signal Report

Friday 11 September 2026 · data to the close

15 SGX stocks · 7 sectors
Last 5 trading days: 07–11 Sep
Sections: 1 today · 2 news & last 5 days · 3 next 3 days · 4 system · 5 findings

1 · Today in 30 seconds

- **Today.** Today the 15 stocks moved -0.2% on average (4 up, 7 down); over 07–11 Sep they moved -1.8%. Weakest: Financial Services (-4.0%), Consumer Goods (-2.2%) and Banking (-2.0%); held up best: Telecommunications (-0.4%) and Industrials (-1.1%).
- **Why.** Biggest movers over 07–11 Sep: SGX Group (-4.0%), Wilmar Intl (-2.9%) and CapitaLand Integ. Comm. Trust (-2.6%). Wilmar Intl moved without a company news story; the move looks sector-wide. For SGX Group and CapitaLand Integ. Comm. Trust, the company news and the price disagree. See section 2.
- **Backdrop.** The market backdrop is normal (VIX 17.1), and Singapore ETF options are neutral (put/call 0.77).
- **New today.** Today's news added a positive signal for CapitaLand Integ. Comm. Trust (not yet in the price), DBS Group (not yet in the price), OCBC Bank (already in the price), SGX Group (the price went the other way) and one more. See section 2.
- **Next 3 days.** The forecast model leans towards a rise for six stocks; a fall for Singtel and no big move for the rest (only CapitaLand Integ. Comm. Trust, Ascendas REIT and Wilmar Intl with a ✓ record); normal 3-day swings run from ±1.0% (Mapletree Industrial) to ±2.2% (Sembcorp Industries), so a bigger move than a stock's own swing would be unusual. See section 3.
- **For you.** Flagged □, with a usable model record: Wilmar Intl, where today's news gives no signal, but the forecast model leans to a rise; Ascendas REIT, where today's news gives no signal, but the forecast model leans to a rise. Their cards are worth reading first. The moves in Wilmar Intl came without company news, so sector or market news is the place to check before reacting. If you prefer less day-to-day movement, Mapletree Industrial, ST Engineering, Raffles Medical Group, SGX Group and Sembcorp Industries have the highest chance of no big move.

Which parts can you rely on? Each kind of statement was tested on past data (results in section 5).

✓ Prices and changes: fact (sections 1-2)	○ News & signals: describe today, not a forecast (sections 1-2)	✓ Normal 3-day swing: reliable, held 74 times in 100 (section 3)	! Calmer than most: promising, still being confirmed (section 3)	✗ Up-or-down lean: not reliable, even with ✓ (section 3)

All 15 stocks today

Ranked by today's news-and-signals reading, most positive first. No market-wide signal fired today.

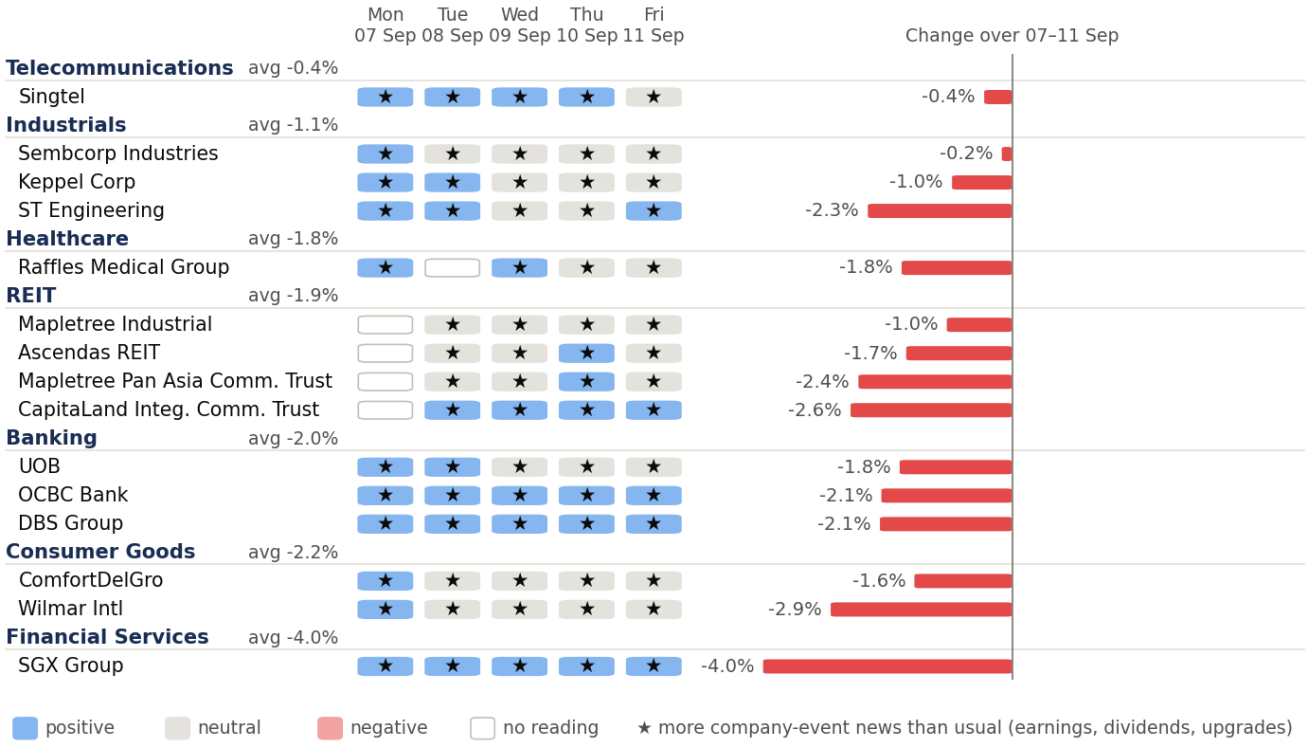

#	Stock	Today	07–11 Sep	News & signals	News today	Price chart	Price vs news
1	CapitaLand Integ. Comm. Trust □	+0.0%	-2.6%	**Positive**	Mostly positive (28)	Oversold · Below range	Not yet in the price
2	DBS Group □	+0.3%	-2.1%	**Positive**	Mostly positive (50)	Weekly up · Above avg price	Not yet in the price
3	OCBC Bank □	+0.7%	-2.1%	**Positive**	Mostly positive (50)	Weekly up · Above avg price	Price agreed
4	SGX Group □	-1.5%	-4.0%	**Positive**	Mostly positive (50)	Weekly up · Below range · Above avg price	Price went the other way
5	ST Engineering □	-0.3%	-2.3%	**Positive**	Mostly positive (50)	—	Not yet in the price
6	Mapletree Pan Asia Comm. Trust □	-0.8%	-2.4%	**Neutral**	Mixed (22)	Oversold · Weekly down · Below range	Moved without a signal
7	Sembcorp Industries □	+0.0%	-0.2%	**Neutral**	Mostly positive (25)	Trend turned down · Above avg price	No signal, little move
8	Raffles Medical Group □	+0.6%	-1.8%	**Neutral**	Mostly positive (29)	Weekly down	No signal, little move
9	Singtel □	-0.4%	-0.4%	**Neutral**	Mixed (50)	Above avg price	No signal, little move
10	Wilmar Intl □ □	+0.0%	-2.9%	**Neutral**	Mixed (20)	Above avg price	No signal, little move
11	UOB □	+0.7%	-1.8%	**Neutral**	Mixed (49)	Trend turned down · Above avg price	Moved without a signal
12	Keppel Corp □	-0.3%	-1.0%	**Neutral**	Mixed (31)	Trend turned down · Above avg price	No signal, little move
13	Ascendas REIT □ □	+0.0%	-1.7%	**Neutral**	Mixed (19)	Weekly down	No signal, little move

14	ComfortDelGro □	-0.8%	-1.6%	**Neutral**	Mixed (46)	Weekly down	Moved without a signal
15	Mapletree Industrial □	-0.5%	-1.0%	**Neutral**	Mostly negative (24)	—	No signal, little move

The ranking describes today: in our tests it did not predict which stocks did better the next day, so it is not a list of stocks to pick. News today: the tone and number of company articles collected today. Price chart: chart signals that fired. Price vs news: whether today's price moved with the reading (a move within ±0.6%, a normal day, counts as no reaction). □ more company-event news than usual (earnings, dividends, upgrades). □ worth a closer look (2 today; meaning in the glossary).

2 · The last 5 trading days and what may explain them

Each square is one day's news-and-signals reading for a stock; the bar is its price change over 07–11 Sep. Stocks are grouped by sector, best sector first.

Where today's news adds something

The stocks with a positive or negative news-and-signals reading today (□ first, strongest first).

The AI summaries mention a 'geopolitical backdrop' and 'political news volume': those two rules fire every day and cancel out, so they carry no information (section 5).

Wilmar International Consumer Goods · -2.9% over 07–11 Sep

In short (AI-written, checked) Wilmar International fell 2.9% over 07–11 Sep. The news today is mixed and does not clearly explain the move. The forecast model suggests a rise, but its record is only a weak signal.
What happened Fell 2.9% over 07–11 Sep, most of it on Tue 08 Sep (-1.8%). Today +0.0%.
Today: news vs price No news signal today (neutral reading); the price was unchanged. The forecast model still leans 'rise'. (Pattern: Model-only view.)
Last 5 days in context Company news collected today was mixed; the price fell 2.9% over 07–11 Sep, its sector peer ComfortDelGro -1.6%, and the 15 stocks -1.8% on average. So there is no company story in the news, and the move looks sector-wide.
News today 20 articles collected today: 2 positive, 5 negative, 13 neutral (mixed). Event tags: dividend, earnings, merger or acquisition, upgrade, profit warning.
Headlines + “Is Wilmar’s Higher Interim Dividend Signaling a Shift in Capital Allocation Priorities for S…” (simplywall.st, 16 Aug)
Price chart RSI 43, between 30 and 70: no unusually fast move; price above its volume-weighted average.
News & signals reading Neutral today (score +0.18; positive above +0.35, negative below −0.35), and on 3 of the 4 earlier recorded days. The rules for and against did not add up to a clear reading.
Rules behind the reading Up: earnings/dividend headlines +0.20, above average price +0.02. Down: warning/downgrade headlines −0.06. Market-wide: political news +0.01 (unreliable, section 5).
AI summary of the evidence (checked) Wilmar International’s outlook remains neutral, with rule-based analysis balancing positive geopolitical backdrop and corporate events against decisive negative political news volume. ML-model from both LogReg and RandomForest models reinforce this equilibrium, highlighting RSI momentum as a positive driver while political news tone and volume dampen upside. Recent headlines – such as the dip in share price amid palm oil futures slide and the 25% loss over five years – underscore the negative undercurrents, though the company’s upcoming earnings report may provide clarity. The macro environment, marked by war-related recession fears and airport disruptions, adds further caution. Overall, the consensus leans neutral, with contradictions noted between the rule-based neutral stance and the negative ML predictions.
Forecast lean Rise over the next 3 trading days (chance 91%); its normal 3-day swing is ±2.0%. Past record on this stock: ✓, but rise-or-fall calls marked ✓ were right only 26% in testing, so treat the direction as unknown.

Ascendas REIT REIT · -1.7% over 07–11 Sep

In short (AI-written, checked) Ascendas REIT fell 1.7% over 07–11 Sep. The news today is mixed and does not clearly explain the move. The forecast model suggests a rise, but its record is only a weak signal.
What happened Fell 1.7% over 07–11 Sep; its biggest day was Wed 09 Sep (-0.8%). Today +0.0%.
Today: news vs price No news signal today (neutral reading); the price was unchanged. The forecast model still leans 'rise'. (Pattern: Model-only view.)
Last 5 days in context Company news collected today was mixed; the price fell 1.7% over 07–11 Sep, its 3 sector peers -2.0% on average, and the 15 stocks -1.8% on average. So there is no company story in the news, and the move looks sector-wide.
News today 19 articles collected today: 6 positive, 4 negative, 9 neutral (mixed). Event tags: dividend, earnings, merger or acquisition.
Price chart RSI 30, between 30 and 70: no unusually fast move; weekly trend down.
News & signals reading Neutral today (score +0.07; positive above +0.35, negative below −0.35), and on 2 of the 3 earlier recorded days. The rules for and against did not add up to a clear reading.
Rules behind the reading Up: earnings/dividend headlines +0.20. Down: weekly trend down −0.15. Market-wide: political news +0.01 (unreliable, section 5).
AI summary of the evidence (checked) The neutral outlook is driven by a mix of positive and negative signals. On the positive side, a positive geopolitical backdrop (weight 0.25) and recent corporate expansion into three Singapore industrial assets (weight 0.204) support a stable stance, while RSI momentum (+0.181) and higher news coverage volume (+0.134) reinforce this view. Conversely, elevated political news volume (weight 0.242) and a negative weekly timeframe (weight 0.146) temper enthusiasm, and the ML-model-derived weekly trend confirmation (-0.088) introduces a subtle downside bias. Despite these mixed signals, the consensus across both models remains neutral, and the overall confidence is moderate at 0.58. The outlook acknowledges the risk of a global recession hinted by the "Prolonged war in Iran could tip the global economy into recession" headline, but the local property market resilience and recent acquisitions mitigate immediate concern.
Forecast lean Rise over the next 3 trading days (chance 98%); its normal 3-day swing is ±1.2%. Past record on this stock: ✓, but rise-or-fall calls marked ✓ were right only 26% in testing, so treat the direction as unknown.

CapitaLand Integrated Commercial Trust REIT · -2.6% over 07–11 Sep

In short (AI-written, checked) CapitaLand Integrated Commercial Trust fell 2.6% over 07–11 Sep. The news today is mostly positive but does not yet appear in the price, and the company news and price disagree. The forecast model suggests a rise, but its record is only a weak signal.
What happened Fell 2.6% over 07–11 Sep, most of it on Thu 10 Sep (-1.7%). Today +0.0%.
Today: news vs price Positive reading, but the price was unchanged, within a normal day's ±0.6%: the news has not shown up in the price. The forecast model still expects that direction. (Pattern: Muted, pending.)
Last 5 days in context Company news collected today was mostly positive; the price fell 2.6% over 07–11 Sep, its 3 sector peers -1.7% on average, and the 15 stocks -1.8% on average. So the company news and the price disagree; the move looks sector-wide.
News today 28 articles collected today: 13 positive, 5 negative, 10 neutral (mostly positive). Event tags: dividend, earnings, merger or acquisition.
Headlines + “CapitaLand Integrated Commercial Trust leads institutional inflows as fund flows reverse course” (reitsweek, 09 Sep)
Price chart RSI 29, below 30: the price fell fast ('oversold'); price below its usual range (Bollinger band).
News & signals reading Positive today (score +0.73; positive above +0.35, negative below −0.35), and on all 3 earlier recorded days. No single rule decides it.
Rules behind the reading Up: RSI oversold +0.38, earnings/dividend headlines +0.20, positive company news +0.18. Down: below usual range −0.04. Market-wide: political news +0.01 (unreliable, section 5).
AI summary of the evidence (checked) CapitaLand Integrated Commercial Trust remains positive on the back of strong technical signals such as RSI oversold and price above VWAP, reinforced by recent positive corporate actions like the $600m private placement and a $160m upgrade of Plaza Singapura. Positive company news sentiment and a favorable geopolitical backdrop further support the outlook, while the LogReg and RandomForest models both highlight momentum from RSI and news share. However, the company faces contradictions: elevated political news volume and a negative political tone, along with price below the Bollinger lower band, introduce negative nuances. Despite these risks, the consensus positive stance is maintained, with the debt issuance viewed as a manageable risk in the current neutral macro environment.
Forecast lean Rise over the next 3 trading days (chance 99%); its normal 3-day swing is ±1.2%. Past record on this stock: ✓, but rise-or-fall calls marked ✓ were right only 26% in testing, so treat the direction as unknown.

3 · The next 3 trading days: how much each stock may move

The normal swing and the calmer stocks have held up in testing. The up-or-down lean has not: even with ✓, a rise-or-fall call is no better than a guess.

Stock	Normal 3-day swing	Calmer than most	Forecast lean	Chance	Record vs simple rule
Mapletree Industrial	±1.0%	✓ calmer	No big move	>99%	±0 pts ✓
Raffles Medical Group	±1.1%	✓ calmer	No big move	97%	±0 pts ✓
Ascendas REIT	±1.2%		Rise	98%	+14 pts ✓
CapitaLand Integ. Comm. Trust	±1.2%		Rise	99%	±0 pts ✓
UOB	±1.4%		No big move	51%	−43 pts ✗
Singtel	±1.5%		Fall	41%	−43 pts ✗
ComfortDelGro	±1.5%		Rise	85%	−29 pts ✗
Mapletree Pan Asia Comm. Trust	±1.5%		Rise	88%	−7 pts ✗
DBS Group	±1.5%		No big move	75%	−7 pts ✗
ST Engineering	±1.7%	✓ calmer	No big move	99%	+21 pts ✓
SGX Group	±1.8%	✓ calmer	No big move	94%	−21 pts ✗
OCBC Bank	±1.8%		Rise	99%	−21 pts ✗
Wilmar Intl	±2.0%		Rise	91%	+29 pts ✓
Keppel Corp	±2.2%		No big move	93%	−7 pts ✗
Sembcorp Industries	±2.2%	✓ calmer	No big move	94%	+7 pts ✓

Normal 3-day swing: about 2 times in 3 the 3-day change stays inside it (last 20 trading days). Calmer than most: the five highest chances of no big move. Forecast lean: the model's most likely 3-day outcome (rise above +1.04%, fall below −1.04%, otherwise no big move) and the probability it gave. Record vs simple rule: percentage points more (or fewer) of its calls on this stock that were right over the last 30 days than always guessing the stock's most common past outcome; ✓ no more than 5 points behind, ✗ further behind. Sorted calmest first.

What these numbers are worth

- **Normal 3-day swing.** Held 74% of the time in 420 tests (about 68% expected). Use it as a yardstick: a 3-day move bigger than a stock's swing is unusual for that stock and worth checking the news for; it is not a signal by itself.
- **Calmer than most.** Mapletree Industrial, ST Engineering, Raffles Medical Group, SGX Group and Sembcorp Industries: the five with the highest chance of no big move. In tests over 31 trading days, the five picked this way moved more than 1% about 4 in 10 times, the other ten about 6 in 10 times. If you prefer less day-to-day movement, these have moved least often.
- **Up-or-down lean.** Not reliable: right 41% of 210 past calls, against 55% for always guessing 'no big move'. Calls marked ✓ were right 48%, the rest 33%, but the gain is in 'no big move' calls (59% right); ✓ rise-or-fall calls were right only 26% of 39, so a ✓ never makes a direction likely. Before its probabilities were refitted, chances of 90% or more were right only 38% of the time.

4 · The system behind this report

Four stages run in sequence after every close. Every number on the pages above comes from one of them; nothing is written by hand.

Stage	What it does for this report
1 · Collect the day's facts	Today's raw facts. 543 company news articles (each read as positive, negative or neutral by FinBERT, a finance language model) and 72 political articles; price-chart indicators (RSI, MACD, Bollinger bands, VWAP, weekly trend); the market backdrop (VIX 17.1, US yield spread); Singapore ETF options positioning (put/call 0.77).
2 · Read the news and signals	What the news and indicators say on top of the price itself: one reading per stock (sections 1–2), built in four layers. (1) Weighted rules score the day's evidence — the scores and rules on the cards. (2) Two independent machine-learning models re-read the same inputs as a second opinion. (3) A contradiction check compares all layers and flags internally mixed readings (named on the cards when strongly mixed). (4) An AI writer (an open-source model served by Groq) drafts the news summary; it may only phrase what the rules computed, and a summary that fails the checks is replaced by a fixed template.
3 · Forecast the next 3 days	The 3-day forecast and chance for every stock (section 3). Three model families (logistic regression, random forest, XGBoost) are re-evaluated every week in a champion–challenger setup. A replay of that weekly choice under 15 settings moved accuracy only between 53.8% and 54.6% (0–4 switches), and the pooled winner led per stock on just 4 of 15: switching added churn, not accuracy. The serving model is therefore pinned (random forest) and the weekly evaluation is kept as monitoring. Each forecast carries its own per-stock record — the ✓ / ✗ column.
4 · Check and write the report	Sorts each stock into one of 11 patterns (below; shown on the cards and table in plain words as 'price vs news'), flags what deserves a closer look (□), picks the cards, and draws the day's market read: where the moves were, whether company news, the sector or the whole market moved with them, and what the backdrop and the forecast add. Every kind of statement carries its tested record (section 5). An AI writer, the same model as stage 2, rewrites the code-written market read in plainer words and drafts each card's 'In short' line. It may not write a single digit (code fills in every number), and a draft that breaks any rule — no advice, no targets, no claimed certainty, no number or stock it was not given, no rise word next to a fall, no claim that the news explains a move the report says it does not, no more than little weight on the forecast, no figure in words, no claim against the stored price facts — is replaced by the template text.

AI-written text in this report: the market read and 'In short' lines (stage 4) and the news summaries (stage 2), all checked; every number, table and verdict is computed by code. In the project's documentation the four stages are Tasks 1–4, 5, 6 and 7.

Today's patterns: how news, price and forecast line up

Pattern	Stocks today	Meaning
Quiet (6)	UOB, Mapletree Industrial, Singtel, Keppel Corp, Sembcorp Industries, Raffles Medical Group	no directional signal today
Model-only view (4)	Mapletree Pan Asia Comm. Trust, Ascendas REIT, Wilmar Intl, ComfortDelGro	signals flat, but the model has a view
Dormant (2)	DBS Group, ST Engineering	a slight lean in the signals; neither price nor model followed
Momentum (1)	OCBC Bank	news and price agreed; the model expects the move to continue
Muted, pending (1)	CapitaLand Integ. Comm. Trust	signals leaned one way, price barely moved; the model still expects that direction
Noise (1)	SGX Group	price went against the signals; the model has no clear view

The other patterns in the 11-pattern engine did not occur today; the full set is defined in the final report, Appendix C. The contradiction check rated 1 of 15 readings strongly mixed (named on the cards) and 11 mildly mixed today.

5 · What three months of testing show

Each part of the system was tested on the project's stored data before it was allowed into this report. Results across all 15 stocks; forecast records count only outcomes known by the report date, research results are from the whole project:

What was tested	What we found	Verdict	What it means for you
Can today's news and signals pick stocks?	The ranking did not predict next-day returns against the other stocks (rank correlation -0.02 over 21 days).	○ Describes only	Use it to understand the day, not to pick stocks
Was the news reading balanced?	An audit found one rule (company-event news) firing on 99.7% of readings, so readings leaned positive. Fixed on 21 Sep: positive readings 56% → 33%, with no loss of information.	✓ Found and fixed	Readings are more balanced; negative ones stay rare
Can the model forecast up or down?	Live calls right 41% of 210 vs 55% for always 'no big move'. With honest probabilities, RandomForest, XGBoost and logistic regression all scored 53.3–54.0% vs 53.3%.	✗ Not reliable	Three-day direction is not predictable from these inputs
Were its stated chances honest?	When the live model said 90% or more it was right 38% of the time (78 calls): its calibration had been fitted on its own training rows. Refitted out-of-fold, no model says 90%.	! Found and fixed	Never read a high chance as near-certain
Does marking weak forecasts help?	✓ calls right 48%, others 33%; the gain is in 'no big move' calls (59%). ✓ rise-or-fall calls: 26% of 39.	! For 'no big move' only	Trust ✓ on 'no big move', never on a direction
Does switching models weekly help?	Replaying the weekly champion choice under 15 settings gave 53.8–54.6%: switching added churn, not accuracy.	○ No gain	One model (RandomForest) is kept fixed
How much will a stock move?	The normal 3-day swing held 74% of the time (420 tests; about 68% expected).	✓ Reliable	Judge whether a move is unusual for that stock
Which stocks will be calmer?	The five with the highest chance of no big move moved over 1% about 4 in 10 times, the others about 6 in 10 (31 test days). The rule was set after looking at the data.	! Promising	A hint where less is likely to happen
Does □ mean a bigger move?	No. Next 3 days: flagged stocks moved 1.2% on average, the rest 1.3% (17 flags, 18 dates).	○ Not a forecast	□ means read the card first
What do seven years of prices say?	A stock that beat the other 14 on a day tended to lag slightly the next day, 2019-2025 (rank correlation +0.071, t 9.8), but by less than trading costs.	○ Real but small	Do not chase a one-day jump

Limitations

- About three months of data in one market phase: every rate above could change as more data arrives.
- News readings rarely turn negative: bearish rules fire less often and weigh less. No negative reading means no negative signal was found, not that there was no bad news.
- Free data: options data is one Singapore stock-market fund shared by all 15 stocks, and news publication times have not been checked against the report's cut-off.
- One political-news rule fires every day (it reads the classifier's confidence, not the tone), as does its counterweight; the two are summed and marked 'unreliable'.
- The news search often returns older articles, so only headlines from the last 30 days are shown; some stocks show none on a given day.

Words used in this report

Word	Meaning
News & signals	What today's news and indicators say on top of the price itself: positive, neutral or negative. It describes the day; the forecast is a separate model's job.
News today	The company articles collected on the day, each read as positive, negative or neutral by a finance language model (FinBERT). 'Mostly positive' means clearly more positive than negative articles.
Normal day / big move	A normal day: a one-day move within about ±0.6%, treated as the price not reacting. A big move (forecast): a three-day change beyond about ±1%. Both are half a standard deviation of past moves.
RSI	A 0-100 gauge of how fast the price has moved lately. Below 30 'oversold' (fell fast), above 70 'overbought' (rose fast).
Average price (VWAP)	The day's average price, weighted by how many shares traded at each price.
Usual range (Bollinger band)	The 20-day average price plus or minus two standard deviations; the price stays inside it on most days, so a close outside it is unusual.
Trend turned (MACD)	A short-term price average crossed a longer one.
Singapore ETF options	Bets traders place on a fund that tracks Singapore shares; more 'puts' means more people buying protection against a fall. The same for all 15 stocks.
Normal 3-day swing	How far the stock usually moves over three trading days (its recent daily volatility × √3); about 2 times in 3 the move stays inside it. A yardstick for whether a move is unusual.
Calmer than most	The five stocks with the highest chance of no big move in the forecast model's probabilities for the day.
Forecast lean	The forecast model's most likely outcome over the next three trading days: rise, fall or no big move, with the probability it gave. Probabilities are calibrated out-of-fold, so 50% means about half come true.
✓✗□ □	□ more company-event news than usual. □ worth a closer look: the price went against the news, or the news is silent while the model leans one way, and the model has a usable record on this stock. ✓ / ✗ the model's record on that stock is about as good as or better than / worse than always guessing its most common past outcome.

General information about 15 listed companies, generated automatically from stored data. It is not financial advice or a recommendation to deal in any security, and it takes no account of your circumstances. Past patterns do not guarantee future results.
