SGX Daily Signal Report

Tuesday 22 September 2026 · data to the close

15 SGX stocks · 7 sectors
Last 5 trading days: 16–22 Sep
Sections: 1 today · 2 news & last 5 days · 3 next 3 days · 4 system · 5 findings

1 · Today in 30 seconds

- **Today.** Today the 15 stocks moved +0.8% on average (9 up, 2 down); over 16–22 Sep they moved +0.5%. Weakest: Telecommunications (-2.9%), Consumer Goods (-0.7%) and REIT (-0.5%); strongest: Banking (+2.9%) and Financial Services (+1.9%).
- **Why.** Biggest movers over 16–22 Sep: ST Engineering (+5.5%), OCBC Bank (+3.7%) and UOB (+3.6%). OCBC Bank and UOB moved without a company news story; the moves look sector-wide. For ST Engineering, the company news and the price point the same way. See section 2.
- **Backdrop.** The market backdrop is calm (VIX 14.9), but Singapore ETF options lean defensive (put/call 1.52): more traders are buying protection against a fall.
- **New today.** Today's news added a positive signal for SGX Group (already in the price), DBS Group (not yet in the price), UOB (already in the price) and Ascendas REIT (not yet in the price). See section 2.
- **Next 3 days.** The forecast model leans towards a fall for seven stocks and no big move for the rest (only Singtel and ST Engineering with a ✓ record); normal 3-day swings run from ±1.0% (Mapletree Industrial) to ±2.9% (SGX Group), so a bigger move than a stock's own swing would be unusual. See section 3.
- **For you.** Flagged □, with a usable model record: ST Engineering, where today's news gives no signal, but the forecast model leans to a fall; Singtel, where today's news gives no signal, but the forecast model leans to a fall. Their cards are worth reading first. The moves in OCBC Bank and UOB came without company news, so sector or market news is the place to check before reacting. If you prefer less day-to-day movement, Sembcorp Industries, Keppel Corp, Mapletree Pan Asia Comm. Trust, Wilmar Intl and Mapletree Industrial have the highest chance of no big move.

Which parts can you rely on? Each kind of statement was tested on past data (results in section 5).

✓ Prices and changes: fact (sections 1-2)	○ News & signals: describe today, not a forecast (sections 1-2)	✓ Normal 3-day swing: reliable, held 74 times in 100 (section 3)	! Calmer than most: promising, still being confirmed (section 3)	✗ Up-or-down lean: not reliable, even with ✓ (section 3)

All 15 stocks today

Ranked by today's news-and-signals reading, most positive first. Market-wide today: calm market, VIX below 15; Singapore ETF options lean negative; this applies to all 15 and is not repeated below.

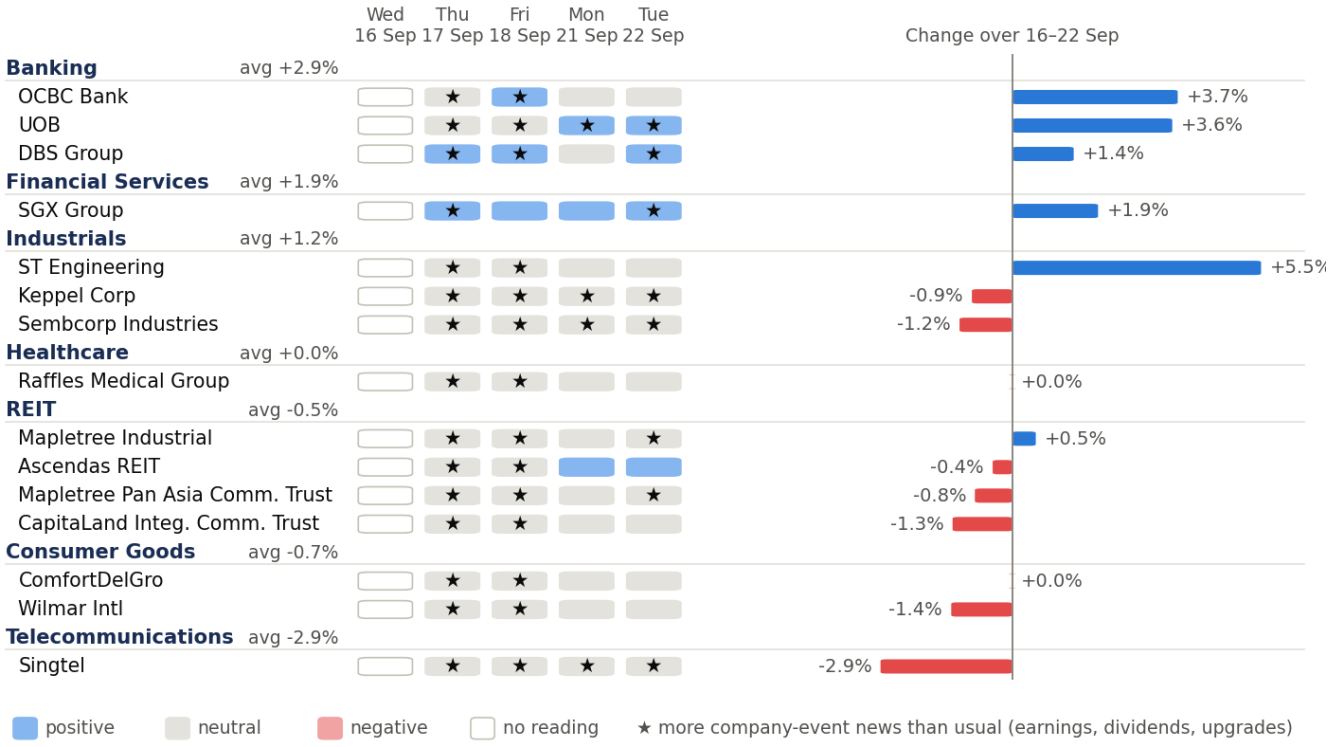

#	Stock	Today	16–22 Sep	News & signals	News today	Price chart	Price vs news
1	SGX Group □	+2.9%	+1.9%	**Positive**	Mostly positive (50)	Oversold	Price agreed
2	DBS Group □	+0.6%	+1.4%	**Positive**	Mixed (50)	Weekly up · Above avg price	Not yet in the price
3	UOB □	+1.7%	+3.6%	**Positive**	Mixed (50)	Weekly up · Above avg price	Price agreed
4	Ascendas REIT	+0.0%	-0.4%	**Positive**	Mostly neutral (18)	Oversold · Weekly down	Not yet in the price
5	Sembcorp Industries □	+0.5%	-1.2%	**Neutral**	Mixed (25)	Above avg price	No signal, little move
6	Keppel Corp □	+0.3%	-0.9%	**Neutral**	Mostly neutral (32)	—	No signal, little move
7	Mapletree Industrial □	+0.0%	+0.5%	**Neutral**	Mostly neutral (27)	—	No signal, little move
8	ST Engineering □	+2.9%	+5.5%	**Neutral**	Mostly positive (43)	—	Moved without a signal
9	OCBC Bank	+1.5%	+3.7%	**Neutral**	Mixed (50)	Weekly up · Above avg price	Moved without a signal
10	Singtel □ □	-0.2%	-2.9%	**Neutral**	Mixed (50)	Below range	No signal, little move
11	Mapletree Pan Asia Comm. Trust □	+0.0%	-0.8%	**Neutral**	Mixed (20)	Weekly down	No signal, little move
12	Wilmar Intl	+0.0%	-1.4%	**Neutral**	Mostly neutral (21)	Above avg price	No signal, little move
13	CapitaLand Integ. Comm. Trust	-0.9%	-1.3%	**Neutral**	Mostly neutral (22)	—	Moved without a signal
14	Raffles Medical Group	+0.6%	+0.0%	**Neutral**	Mixed (27)	Weekly down	No signal, little move
15	ComfortDelGro	+1.6%	+0.0%	**Neutral**	Mostly neutral (36)	Weekly down · Below	Moved without a

		range	signal

The ranking describes today: in our tests it did not predict which stocks did better the next day, so it is not a list of stocks to pick. News today: the tone and number of company articles collected today. Price chart: chart signals that fired. Price vs news: whether today's price moved with the reading (a move within ±0.6%, a normal day, counts as no reaction). □ more company-event news than usual (earnings, dividends, upgrades). □ worth a closer look (2 today; meaning in the glossary).

2 · The last 5 trading days and what may explain them

Each square is one day's news-and-signals reading for a stock; the bar is its price change over 16–22 Sep. Stocks are grouped by sector, best sector first.

Where today's news adds something

The stocks with a positive or negative news-and-signals reading today (□ first, strongest first).

The AI summaries mention a 'geopolitical backdrop' and 'political news volume': those two rules fire every day and cancel out, so they carry no information (section 5).

ST Engineering Industrials · +5.5% over 16–22 Sep

In short (AI-written, checked) ST Engineering rose 5.5% over 16–22 Sep in the last five days, with its biggest single day of +2.9% on Tue 22 Sep. Today's news was mostly positive but did not add a new signal, so the price move is not explained by fresh news. The forecast model expects a fall, but its record is only as good as a simple rule, so that forecast should be treated with caution.
What happened Rose 5.5% over 16–22 Sep; its biggest day was Tue 22 Sep (+2.9%). Today +2.9%.
Today: news vs price No news signal today (neutral reading); the price rose 2.9%, more than a normal day's ±0.6%: a move without a news signal. The forecast model still leans 'fall'. (Pattern: Model-only view.)
Last 5 days in context Company news collected today was mostly positive; the price rose 5.5% over 16–22 Sep, its 2 sector peers -1.0% on average, and the 15 stocks +0.5% on average. So the company news and the price point the same way.
News today 43 articles collected today: 10 positive, 3 negative, 30 neutral (mostly positive). Event tags: dividend, earnings, merger or acquisition, management change.
Headlines + “Goldman Sachs initiates coverage on ST Engineering; stock ends 2.4% up” (Business Times, 18 Sep)
Price chart RSI 49, between 30 and 70: no unusually fast move.
News & signals reading Neutral today (score +0.30; positive above +0.35, negative below −0.35), and on all 3 earlier recorded days. The rules for and against did not add up to a clear reading.
Rules behind the reading Up: positive company news +0.18. Market-wide: calm market +0.21, ETF options negative −0.10, political news +0.01 (unreliable, section 5).
Forecast lean Fall over the next 3 trading days (chance 58%); its normal 3-day swing is ±2.1%. Past record on this stock: ✓, but rise-or-fall calls marked ✓ were right only 22% in testing, so treat the direction as unknown.

Singtel Telecommunications · -2.9% over 16–22 Sep

What happened Fell 2.9% over 16–22 Sep; its biggest day was Fri 18 Sep (-1.6%). Today -0.2%.
Today: news vs price No news signal today (neutral reading); the price fell 0.2%. The forecast model still leans 'fall'. (Pattern: Model-only view.)
Last 5 days in context Company news collected today was mixed; the price fell 2.9% over 16–22 Sep, against +0.5% for the 15 stocks on average. So there is no company story in the news, and the stock moved against the market; sector or wider news, outside this report's sources, is the place to look.
News today 50 articles collected today: 8 positive, 7 negative, 35 neutral (mixed). Event tags: dividend, earnings, merger or acquisition, management change.
Price chart RSI 37, between 30 and 70: no unusually fast move; price below its usual range (Bollinger band).
News & signals reading Neutral today (score +0.28; positive above +0.35, negative below −0.35), and on all 3 earlier recorded days. The rules for and against did not add up to a clear reading.
Rules behind the reading Up: more event news +0.20. Down: below usual range −0.04. Market-wide: calm market +0.21, ETF options negative −0.10, political news +0.01 (unreliable, section 5).
AI summary of the evidence (checked) Despite a number of negative signals such as elevated political news volume, options market negative positioning, and the price trading below the lower Bollinger band, the overall outlook remains neutral. Positive drivers include a positive geopolitical backdrop, a Risk-On macro regime, and unusual positive corporate event activity, all of which are reflected in the rule-based analysis and the ML-model contributions. Higher news coverage volume and a VIX of 14.87 further support a cautious stance. Recent headlines – for example, Singapore shares dragged by Singtel and the Middle East war driving oil prices to a 10-day low – add downside pressure, but the models still converge on a neutral view, though the linear model leans negative while the random forest remains neutral.
Forecast lean Fall over the next 3 trading days (chance 98%); its normal 3-day swing is ±1.4%. Past record on this stock: ✓, but rise-or-fall calls marked ✓ were right only 22% in testing, so treat the direction as unknown.

SGX Group Financial Services · +1.9% over 16–22 Sep

What happened Rose 1.9% over 16–22 Sep, including +2.9% on Tue 22 Sep. Today +2.9%.
Today: news vs price Positive reading and the price rose 2.9%, more than a normal day's ±0.6%: the news already shows in the price. The forecast model expects a pullback. (Pattern: Mean reversion.)
Last 5 days in context Company news collected today was mostly positive; the price rose 1.9% over 16–22 Sep, against +0.5% for the 15 stocks on average. So the company news and the price point the same way.
News today 50 articles collected today: 13 positive, 2 negative, 35 neutral (mostly positive). Event tags: dividend, earnings, merger or acquisition, upgrade.
Price chart RSI 25, below 30: the price fell fast ('oversold').
News & signals reading Positive today (score +0.88; positive above +0.35, negative below −0.35), and on all 3 earlier recorded days. No single rule decides it.
Rules behind the reading Up: RSI oversold +0.38, more event news +0.20, positive company news +0.18. Market-wide: calm market +0.21, ETF options negative −0.10, political news +0.01 (unreliable, section 5).
AI summary of the evidence (checked) SGX remains positive on the back of strong earnings and a risk-on macro regime, with headlines such as "SGX 1HFY2026 adjusted earnings up 11.6% to $357.1 mil" and "High-return SGX small- and mid-caps fetch higher valuations in 7M 2026" underscoring momentum. The RSI oversold signal and positive corporate event activity further support a potential bounce. However, elevated political news volume and a negative political tone—highlighted by the headline "Middle East War: Oil prices drop to their lowest in 10 days"—introduce caution, and options market negative positioning adds to the risk profile.
Forecast lean Fall over the next 3 trading days (chance 63%); its normal 3-day swing is ±2.9%. Past record on this stock: below a simple rule (✗), so this call carries no weight.

3 · The next 3 trading days: how much each stock may move

The normal swing and the calmer stocks have held up in testing. The up-or-down lean has not: even with ✓, a rise-or-fall call is no better than a guess.

Stock	Normal 3-day swing	Calmer than most	Forecast lean	Chance	Record vs simple rule
Mapletree Industrial	±1.0%	✓ calmer	No big move	84%	±0 pts ✓
Ascendas REIT	±1.1%		No big move	74%	±0 pts ✓
CapitaLand Integ. Comm. Trust	±1.2%		No big move	75%	−20 pts ✗
Raffles Medical Group	±1.3%		No big move	78%	±0 pts ✓
DBS Group	±1.3%		Fall	89%	−40 pts ✗
Singtel	±1.4%		Fall	98%	+13 pts ✓
ComfortDelGro	±1.4%		Fall	78%	−33 pts ✗
Mapletree Pan Asia Comm. Trust	±1.5%	✓ calmer	No big move	89%	−13 pts ✗
Wilmar Intl	±1.7%	✓ calmer	No big move	89%	+7 pts ✓
Keppel Corp	±1.8%	✓ calmer	No big move	95%	−7 pts ✗
Sembcorp Industries	±1.9%	✓ calmer	No big move	97%	+13 pts ✓
OCBC Bank	±2.0%		Fall	97%	−13 pts ✗
UOB	±2.0%		Fall	94%	−13 pts ✗
ST Engineering	±2.1%		Fall	58%	±0 pts ✓
SGX Group	±2.9%		Fall	63%	−20 pts ✗

Normal 3-day swing: about 2 times in 3 the 3-day change stays inside it (last 20 trading days). Calmer than most: the five highest chances of no big move. Forecast lean: the model's most likely 3-day outcome (rise above +1.04%, fall below −1.04%, otherwise no big move) and the probability it gave. Record vs simple rule: percentage points more (or fewer) of its calls on this stock that were right over the last 30 days than always guessing the stock's most common past outcome; ✓ no more than 5 points behind, ✗ further behind. Sorted calmest first.

What these numbers are worth

- **Normal 3-day swing.** Held 74% of the time in 420 tests (about 68% expected). Use it as a yardstick: a 3-day move bigger than a stock's swing is unusual for that stock and worth checking the news for; it is not a signal by itself.
- **Calmer than most.** Sembcorp Industries, Keppel Corp, Mapletree Pan Asia Comm. Trust, Wilmar Intl and Mapletree Industrial: the five with the highest chance of no big move. In tests over 31 trading days, the five picked this way moved more than 1% about 4 in 10 times, the other ten about 6 in 10 times. If you prefer less day-to-day movement, these have moved least often.
- **Up-or-down lean.** Not reliable: right 40% of 285 past calls, against 53% for always guessing 'no big move'. Calls marked ✓ were right 46%, the rest 35%, but the gain is in 'no big move' calls (58% right); ✓ rise-or-fall calls were right only 22% of 46, so a ✓ never makes a direction likely. Before its probabilities were refitted, chances of 90% or more were right only 38% of the time.

4 · The system behind this report

Four stages run in sequence after every close. Every number on the pages above comes from one of them; nothing is written by hand.

Stage	What it does for this report
1 · Collect the day's facts	Today's raw facts. 521 company news articles (each read as positive, negative or neutral by FinBERT, a finance language model) and 72 political articles; price-chart indicators (RSI, MACD, Bollinger bands, VWAP, weekly trend); the market backdrop (VIX 14.9, US yield spread); Singapore ETF options positioning (put/call 1.52).
2 · Read the news and signals	What the news and indicators say on top of the price itself: one reading per stock (sections 1–2), built in four layers. (1) Weighted rules score the day's evidence — the scores and rules on the cards. (2) Two independent machine-learning models re-read the same inputs as a second opinion. (3) A contradiction check compares all layers and flags internally mixed readings (named on the cards when strongly mixed). (4) An AI writer (an open-source model served by Groq) drafts the news summary; it may only phrase what the rules computed, and a summary that fails the checks is replaced by a fixed template.
3 · Forecast the next 3 days	The 3-day forecast and chance for every stock (section 3). Three model families (logistic regression, random forest, XGBoost) are re-evaluated every week in a champion–challenger setup. A replay of that weekly choice under 15 settings moved accuracy only between 53.8% and 54.6% (0–4 switches), and the pooled winner led per stock on just 4 of 15: switching added churn, not accuracy. The serving model is therefore pinned (random forest) and the weekly evaluation is kept as monitoring. Each forecast carries its own per-stock record — the ✓ / ✗ column.
4 · Check and write the report	Sorts each stock into one of 11 patterns (below; shown on the cards and table in plain words as 'price vs news'), flags what deserves a closer look (□), picks the cards, and draws the day's market read: where the moves were, whether company news, the sector or the whole market moved with them, and what the backdrop and the forecast add. Every kind of statement carries its tested record (section 5). An AI writer, the same model as stage 2, rewrites the code-written market read in plainer words and drafts each card's 'In short' line. It may not write a single digit (code fills in every number), and a draft that breaks any rule — no advice, no targets, no claimed certainty, no number or stock it was not given, no rise word next to a fall, no claim that the news explains a move the report says it does not, no more than little weight on the forecast, no figure in words, no claim against the stored price facts — is replaced by the template text.

AI-written text in this report: the market read and 'In short' lines (stage 4) and the news summaries (stage 2), all checked; every number, table and verdict is computed by code. In the project's documentation the four stages are Tasks 1–4, 5, 6 and 7.

Today's patterns: how news, price and forecast line up

Pattern	Stocks today	Meaning
Quiet (7)	CapitaLand Integ. Comm. Trust, Mapletree Pan Asia Comm. Trust, Mapletree Industrial, Keppel Corp, Sembcorp Industries, Wilmar Intl, Raffles Medical Group	no directional signal today
Model-only view (4)	OCBC Bank, Singtel, ST Engineering, ComfortDelGro	signals flat, but the model has a view
Mean reversion (2)	UOB, SGX Group	news and price agreed, but the model expects a pullback
Muted, fading (1)	DBS Group	signals leaned one way, price barely moved; the model expects the opposite
Dormant (1)	Ascendas REIT	a slight lean in the signals; neither price nor model followed

The other patterns in the 11-pattern engine did not occur today; the full set is defined in the final report, Appendix C. The contradiction check rated 2 of 15 readings strongly mixed (named on the cards) and 13 mildly mixed today.

5 · What three months of testing show

Each part of the system was tested on the project's stored data before it was allowed into this report. Results across all 15 stocks; forecast records count only outcomes known by the report date, research results are from the whole project:

What was tested	What we found	Verdict	What it means for you
Can today's news and signals pick stocks?	The ranking did not predict next-day returns against the other stocks (rank correlation -0.02 over 21 days).	○ Describes only	Use it to understand the day, not to pick stocks
Was the news reading balanced?	An audit found one rule (company-event news) firing on 99.7% of readings, so readings leaned positive. Fixed on 21 Sep: positive readings 56% → 33%, with no loss of information.	✓ Found and fixed	Readings are more balanced; negative ones stay rare
Can the model forecast up or down?	Live calls right 40% of 285 vs 53% for always 'no big move'. With honest probabilities, RandomForest, XGBoost and logistic regression all scored 53.3–54.0% vs 53.3%.	✗ Not reliable	Three-day direction is not predictable from these inputs
Were its stated chances honest?	When the live model said 90% or more it was right 38% of the time (125 calls): its calibration had been fitted on its own training rows. Refitted out-of-fold, no model says 90%.	! Found and fixed	Never read a high chance as near-certain
Does marking weak forecasts help?	✓ calls right 46%, others 35%; the gain is in 'no big move' calls (58%). ✓ rise-or-fall calls: 22% of 46.	! For 'no big move' only	Trust ✓ on 'no big move', never on a direction
Does switching models weekly help?	Replaying the weekly champion choice under 15 settings gave 53.8–54.6%: switching added churn, not accuracy.	○ No gain	One model (RandomForest) is kept fixed
How much will a stock move?	The normal 3-day swing held 74% of the time (420 tests; about 68% expected).	✓ Reliable	Judge whether a move is unusual for that stock
Which stocks will be calmer?	The five with the highest chance of no big move moved over 1% about 4 in 10 times, the others about 6 in 10 (31 test days). The rule was set after looking at the data.	! Promising	A hint where less is likely to happen
Does □ mean a bigger move?	No. Next 3 days: flagged stocks moved 1.2% on average, the rest 1.3% (17 flags, 18 dates).	○ Not a forecast	□ means read the card first
What do seven years of prices say?	A stock that beat the other 14 on a day tended to lag slightly the next day, 2019-2025 (rank correlation +0.071, t 9.8), but by less than trading costs.	○ Real but small	Do not chase a one-day jump

Limitations

- About three months of data in one market phase: every rate above could change as more data arrives.
- News readings rarely turn negative: bearish rules fire less often and weigh less. No negative reading means no negative signal was found, not that there was no bad news.
- Free data: options data is one Singapore stock-market fund shared by all 15 stocks, and news publication times have not been checked against the report's cut-off.
- One political-news rule fires every day (it reads the classifier's confidence, not the tone), as does its counterweight; the two are summed and marked 'unreliable'.
- The news search often returns older articles, so only headlines from the last 30 days are shown; some stocks show none on a given day.

Words used in this report

Word	Meaning
News & signals	What today's news and indicators say on top of the price itself: positive, neutral or negative. It describes the day; the forecast is a separate model's job.
News today	The company articles collected on the day, each read as positive, negative or neutral by a finance language model (FinBERT). 'Mostly positive' means clearly more positive than negative articles.
Normal day / big move	A normal day: a one-day move within about ±0.6%, treated as the price not reacting. A big move (forecast): a three-day change beyond about ±1%. Both are half a standard deviation of past moves.
RSI	A 0-100 gauge of how fast the price has moved lately. Below 30 'oversold' (fell fast), above 70 'overbought' (rose fast).
Average price (VWAP)	The day's average price, weighted by how many shares traded at each price.
Usual range (Bollinger band)	The 20-day average price plus or minus two standard deviations; the price stays inside it on most days, so a close outside it is unusual.
Trend turned (MACD)	A short-term price average crossed a longer one.
Singapore ETF options	Bets traders place on a fund that tracks Singapore shares; more 'puts' means more people buying protection against a fall. The same for all 15 stocks.
Normal 3-day swing	How far the stock usually moves over three trading days (its recent daily volatility × √3); about 2 times in 3 the move stays inside it. A yardstick for whether a move is unusual.
Calmer than most	The five stocks with the highest chance of no big move in the forecast model's probabilities for the day.
Forecast lean	The forecast model's most likely outcome over the next three trading days: rise, fall or no big move, with the probability it gave. Probabilities are calibrated out-of-fold, so 50% means about half come true.
✓✗□ □	□ more company-event news than usual. □ worth a closer look: the price went against the news, or the news is silent while the model leans one way, and the model has a usable record on this stock. ✓ / ✗ the model's record on that stock is about as good as or better than / worse than always guessing its most common past outcome.

General information about 15 listed companies, generated automatically from stored data. It is not financial advice or a recommendation to deal in any security, and it takes no account of your circumstances. Past patterns do not guarantee future results.
